## The most important thing first

Thanks for your confidence choosing our product.

These operating instructions present themselves as an overview of the technical data and features.

Please read the operating instructions before operating the product.

If you have any questions, please contact your nearest SSD Drives representative.

Improper application of the product in combination with dangerous voltage can lead to injuries.

In addition, damage can also occur to motors or other products.

Therefore please observe our safety precautions strictly.

### Safety precautions

We assume that, as an expert, you are familiar with the relevant safety regulations, especially in accordance with VDE 0100, VDE 0113, VDE 0160, EN 50178, the accident prevention regulations of the employers liability insurance company and the DIN regulations and that you are able to use and apply them.

As well, relevant European Directives must be observed.

Depending on the kind of application, additional regulations e.g. UL, DIN are subject to be observed.

If our products are operated in connection with components from other manufacturers, their operating instructions are also subject to be observed strictly.

# Safety precautions

## Attention !

The digital servo drives are in the sense of EN 50178/VDE 0160 power electronic equipments for regulating the flow of energy in electrical power installations.  
They are exclusively for supplying Eurotherm (or Eurotherm approved) servomotors.  
Handling, installation, operation, and maintenance are only permitted under the conditions of and in keeping with the effective and/or legal regulations, regulation publications and this technical document.

**The operator must make sure that these regulations are strictly followed.**

**Concept of the galvanic separation and insulation:**

Galvanically separation and insulation correspond to EN 50178/VDE 0160, amplified insulation.

**In addition** all digital signal inputs and outputs are galvanically separated either as a relay or via opto coupler. In this way an increased interference security and the limitation of damages in case of external incorrect connections is given.

The voltage level must not exceed the low safety voltage 60V DC or 25V AC, respectively in accordance with EN 50178/VDE 0160.

The operator must make sure that these regulations are strictly followed.

## Caution !

**Opening the servo drive by the operator is prohibited due to reasons of safety and guarantee. The requirement for problem-free operation of the servo drive is the expert configuring !**

# Safety precautions

**Please observe !**

**Especially to be complied with:**

The class of protection which is permitted: protective grounding; operation is only permitted when the protective conductor is connected according to regulations.

The operation of servo drives is not allowed under the sole use of a residual current operated protective device as protection against indirect touching.

The servo drive may only be used in the rack or in its compact enclosure. Furthermore the regulator is designed solely for control cabinet operation.

Work on or with the servo drive may only be carried out with insulated tools.

Installation work may only be done in a deenergized state. When working on the drive, do not only block the Aktiv-input but separate the complete drive from the mains.

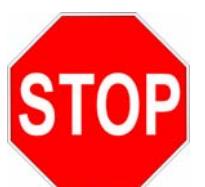

CAUTION - risk of electrical shock, wait 3 minutes after switching off, for discharging the capacitors.

Screws sealed with varnish fulfill an important protection function and may not be moved or removed.

It is prohibited to penetrate the inside of the unit with objects of any kind.

Protect the unit from falling parts (pieces of wire, metal, etc.) during installation or other work in the control cabinet. Metal parts can lead to a short in the servo drive.

Before putting into operation, remove additional covers so that the unit does not overheat. With measurements at the servo drive it is absolutely necessary to observe the potential separation!

**Stop !**

Eurotherm Drives Limited is not liable for damages which occur by not following the instructions or the applicable regulations !!

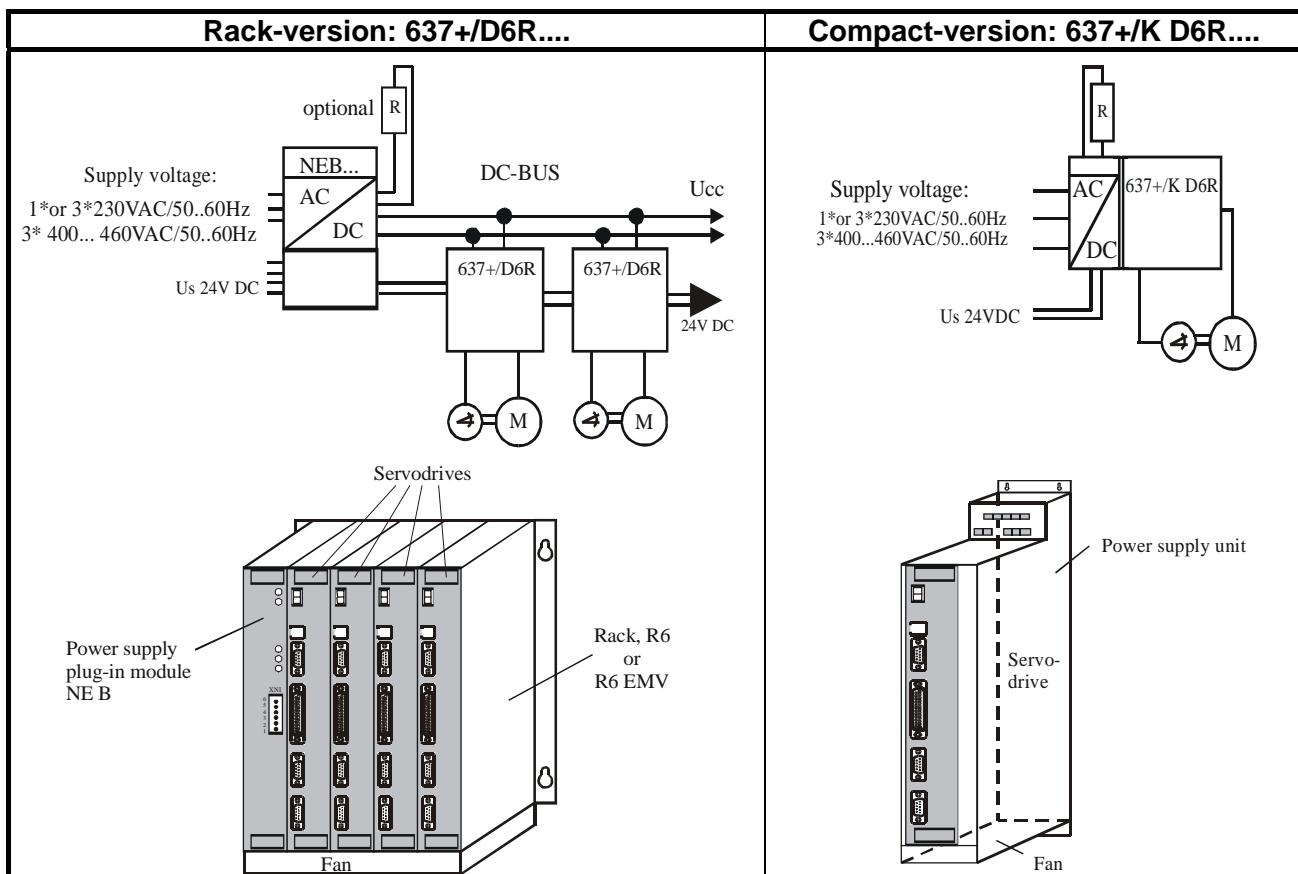

## 1 General

### 1.1 System description

The digital servo drive serves the 4 th generation to regulate the current, speed and position of **AC servo motors**,(standard: with resolver)

All servo controls and functions are realized digitally.

#### System variants

Explanations to rack and power supply modules are documented in separate description.

If required, the returned braking energy can be drawn off into additional external ballast resistors.

The AC-supply voltage is fed directly or via transformer to the associated power supply module.

**The devices are designed to be operated on networks which are grounded on centre point (TN networks) !**

## System description

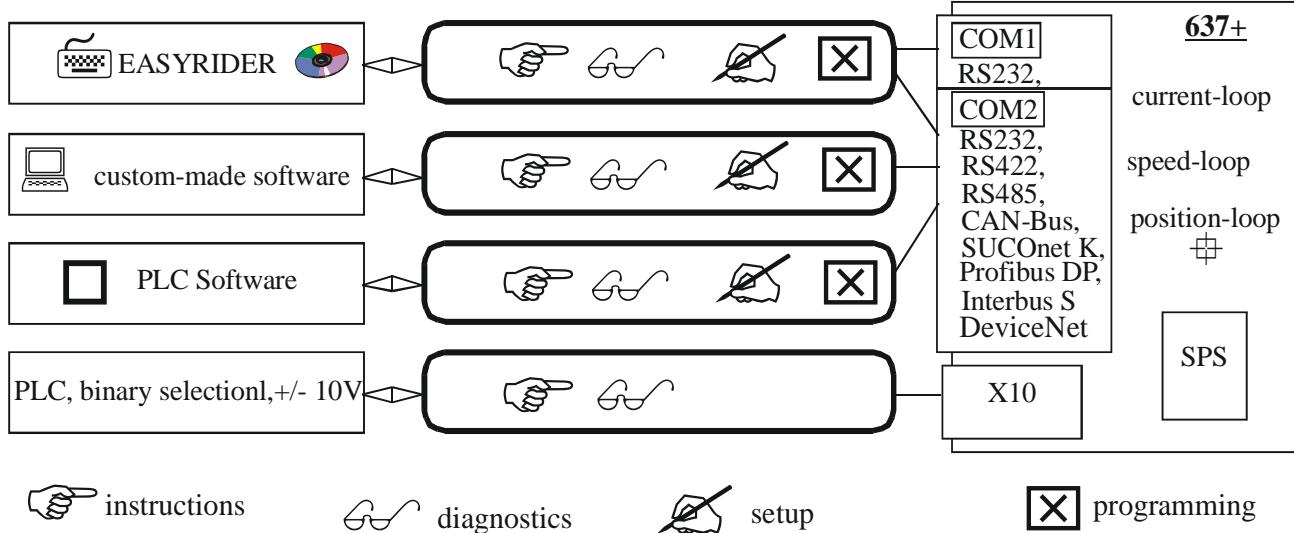

### 1.1.1 Digital communication

#### Diagnose / Setup

General: by 7-segment display

Comfortable: via PC by EASYRIDER® Windows - Software (serial interface RS232)

#### Communication

The serial-communication-protocol is free documented.

(Explanation see separate documentation)

Every user has unrestricted access to all functions and parameters.

### 1.1.2 Operation configurations

There are opportunities ranging from simple current and speed control to programmable position control processes (PLC), supported by the 1500 BIAS-command blocks.

"BIAS" User shell for intelligent drive controls

**see:**

- chapter 3 Operating modes
- chapter 13.2 BIAS - commands
- chapter 13.3 Extended BIAS – commands

## System description

### 1.1.3 Compatibility to 637 servodrives (Not required for new projects)

The 637+ series servo controllers are essentially pin- and functionally compatible with the servo controllers 637. However at replacement of a 637 for a 637+ controller, the existing application must be checked and carefully tested under compliance with the corresponding safety precautions.

The following points should be checked in any case and eventually be adjusted before function test:

1. Motor direction parameter and limit switch setting (please see Release note 637+ V6.12)
2. Position setpoints and comparison values have to be quadrupled, resp. Octal (low encoder resolution at 637)
3. Coupling factors in synchronous applications have to be quadrupled, resp. octal  
(low encoder resolution at 637)
4. Execution of BIAS- and PLC programs is 2.25 times quicker than at 637. This can cause Timing problems at unfavourable programming (e.g. Wait times with NOPs)

Function	637	637+
PC-Operating-Software	EASYRIDER® DOS-Version or Windows-Version	EASYRIDER® Windows -Version
PC-Connection-Cable <b>see: chapter 2.6.2.3</b>	SUBD-9 to LEMO-Connector (COM1)	SUBD-9 to 4-pol Module-Connector (COM1)
Powerpart, Powerdata and Powerconnectors		Unchanged

## 1.2 Key to the models

Marking Model:	Standard					optional		
	a	b	c	d	e	f	g	h
	XXX/	X	D6R	XX	.S4	-X	-X	-XXX

Marking	Description
a	XXX/ = <b>637+</b> ≈ Eurotherm-design (blue)
a	K = 1 axis compact digital servo drive system = (is not used with model plug-in device)
b	D6R = Digital 6U Regulator
c	Rated current: 02 = 2 amperes 04 = 4 amperes 06 = 6 amperes 10 = 10 amperes
	16 = 16 amperes 22 = 22 amperes 30 = 30 amperes
d	.S4 = Digital drive 4 th generation
e	Intermediate circuit rated voltage: -3 = 325V (230V AC) 16..30A only as racksystem -7 = 650V (460V AC)
f	-E = with EMC-Clip unit -0 = without EMC-Clip unit
g	additional optionmodules on the drive for communication via <u>COM2</u> -232 = RS 232 interface -422 = RS 422 interface -485 = RS 485 interface -CAN = CAN - bus -DEV = CAN - bus / DeviceNet -SUC = SUCOnet K -PDP = Profibus DP -IBS = Interbus S (Attention: changed front plate) -EA5 = I/O - interface (5E, 2A) <u>COM2</u> -EAE = I/O - Interface (14E, 10A) <u>X200</u> (Attention: changed front plate) -XXE = Combination of communication interface and I/O interface EAE (the first two places of com.-interface + E for I/O-interface EAE)
h	X300 – Functionsmodules = no information = standard <u>X30</u> Resolver (-RD2) -HF2 = HIPERFACE – Module 2. Version

### 1.2.1 Example

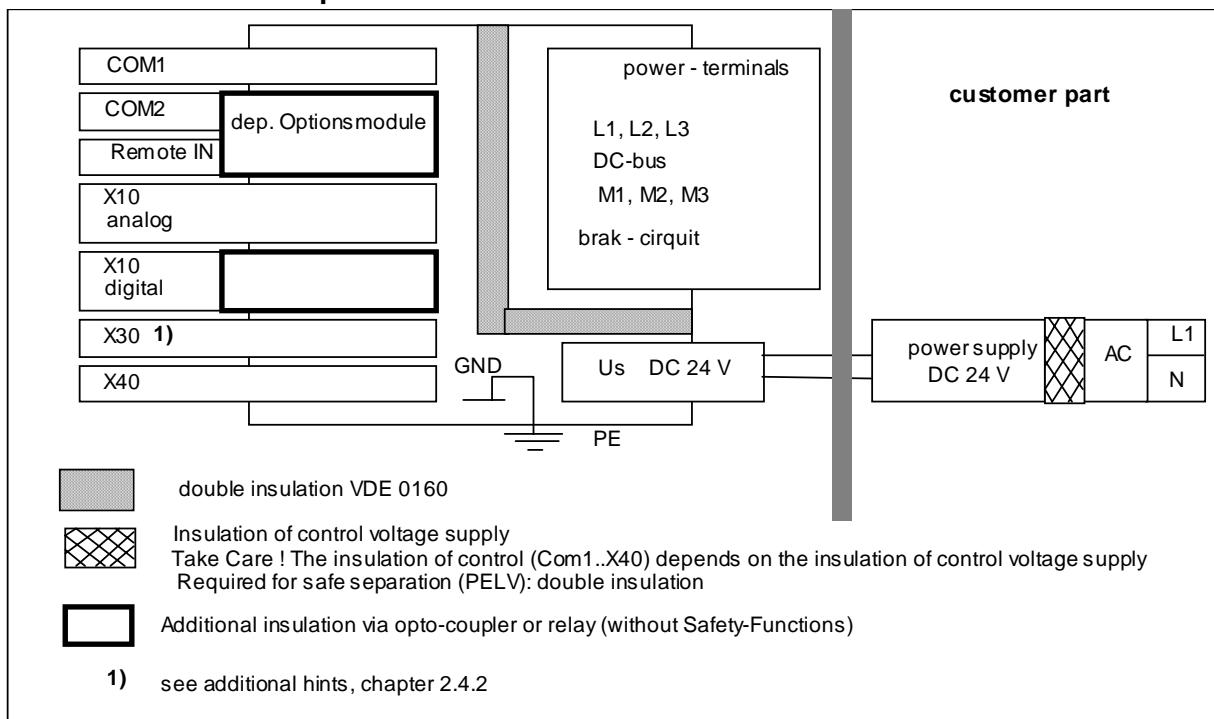

Typical example of an order of a 1-axis- compact device in Eurotherm-design

**Model: 637+/K D6R 02.S4-7-CAN**

637+/ = Eurotherm-design (blue)  
 K = 1 axis compact device  
 D6R = Digital 6U Regulator  
 02 = 2 amperes Regulator rated current  
 .S4 = Digital drive 4 th generation  
 -7 = 650V UCCN  
 -CAN = CAN-Bus – Optionsmodule insertion

## 1.3 Range data

### 1.3.1 Insulation concept

### 1.3.2 General data

Enclosure Rating (for mounting in cubicle)		IP20
operating temperature range		EN 50178 / VDE 0160, class 3K3
storage temperature range		-25°...+55° C
air pressure		86 kPa - 106 kPa
Humidity		5 % - 85% 40°C
Operatating Temp		0...40°C
reduced operation derating of the output current	<sup>1)</sup>	>40°...< 50°C 2% / °C
Altitude h		h ≤ 1000m
reduced operation Derating of the output current	<sup>1)</sup>	h > 1000...≤ 4000m 1% / 100m
Safety Overvoltage-category of power circuit		EN 50178 / VDE 0160, UL, cUL III,
Pollution degree for mounting in cubicle		VDE / UL: 2
Vibration test in accordance with DIN IEC 68-2-6, test FC		
Condition for testing		
Frequency range		10...57Hz 57...150Hz
Amplitude		0,075 mm
Acceleration		1g
Test time per axis		10 sweep cycle
Frequency sweep speed		1 Oktave/min

<sup>1)</sup> Use only fan-cooled devices. For reduced operating conditions, no UL-Approbation are available.

## Range data

4) References chapter 1.3.6

## Range data

### 1.3.5 Single- and three-phase supply

Due to the line-ripple of DC-Bus, the rate of usable output voltage is derated like follows.  
This deration effects the max. reachable speed of the applied motor.

Three-phase-supply:

the unloaded output voltage will be derated to approx. 90%, maximum 85 %

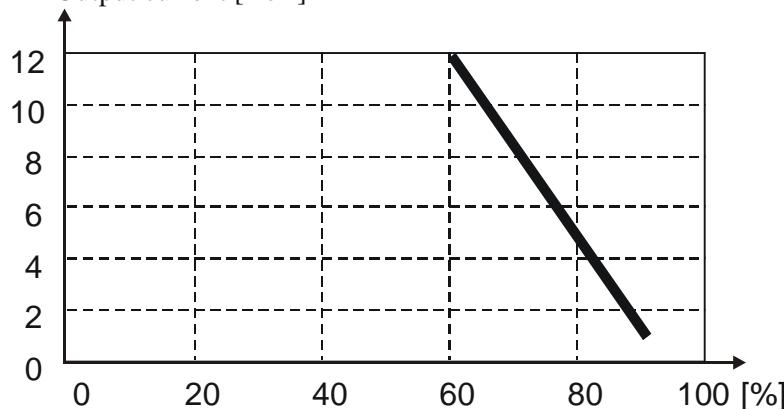

Single-phase: supply: 50 – 60Hz

only drive 637+ / ..02 up to 06

see following diagram:

Derating of servo drive output voltage in case of single-phase supply

Output current [Aeff]

Output voltage in % of unloaded condition

Hints for setup:

To avoid unexpected tripping of undervoltage threshold  
(EASYRIDER® Windows - Software), this value should be set to default.

Required motor-terminal-voltage for specified speed.

Approximation: (up to 3000RPM)

$$U_{kl} = 1,2 * (\text{EMF} * n / 1000) + I * (R_{ph} + RL) [\text{V}]$$

U<sub>kl</sub> required motorvoltage [V RMS]

EMF Back-EMF of motor [V RMS] / 1000 RPM

R<sub>ph</sub> resistance of motor (between terminals) [Ω]

RL line resistance of motor cable [Ω]

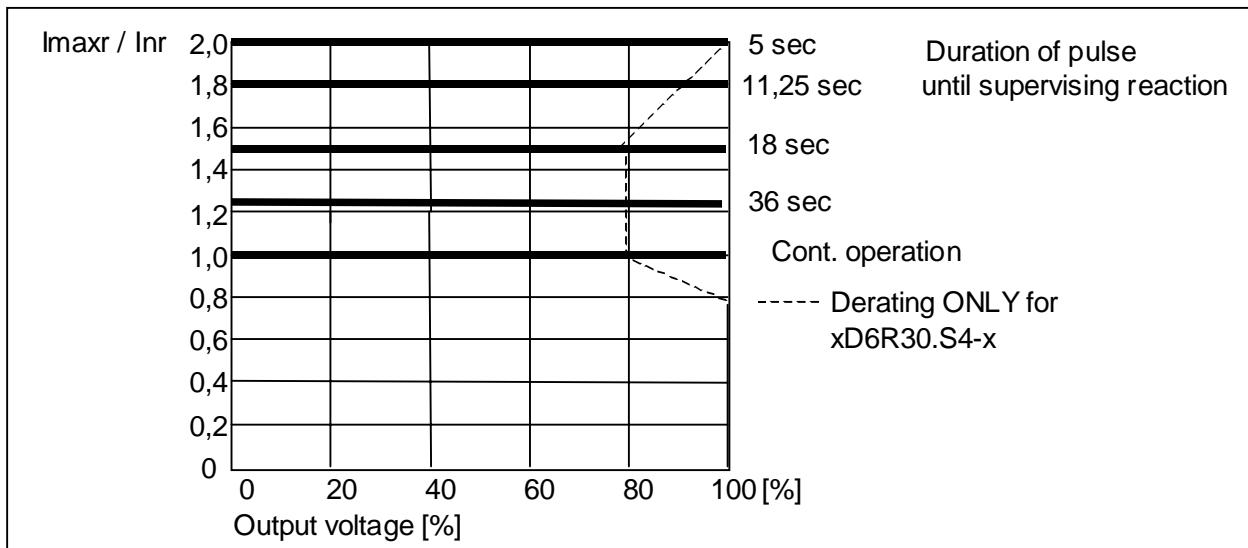

I motor-current [A RMS]

## Range data

### 1.3.6 Output power

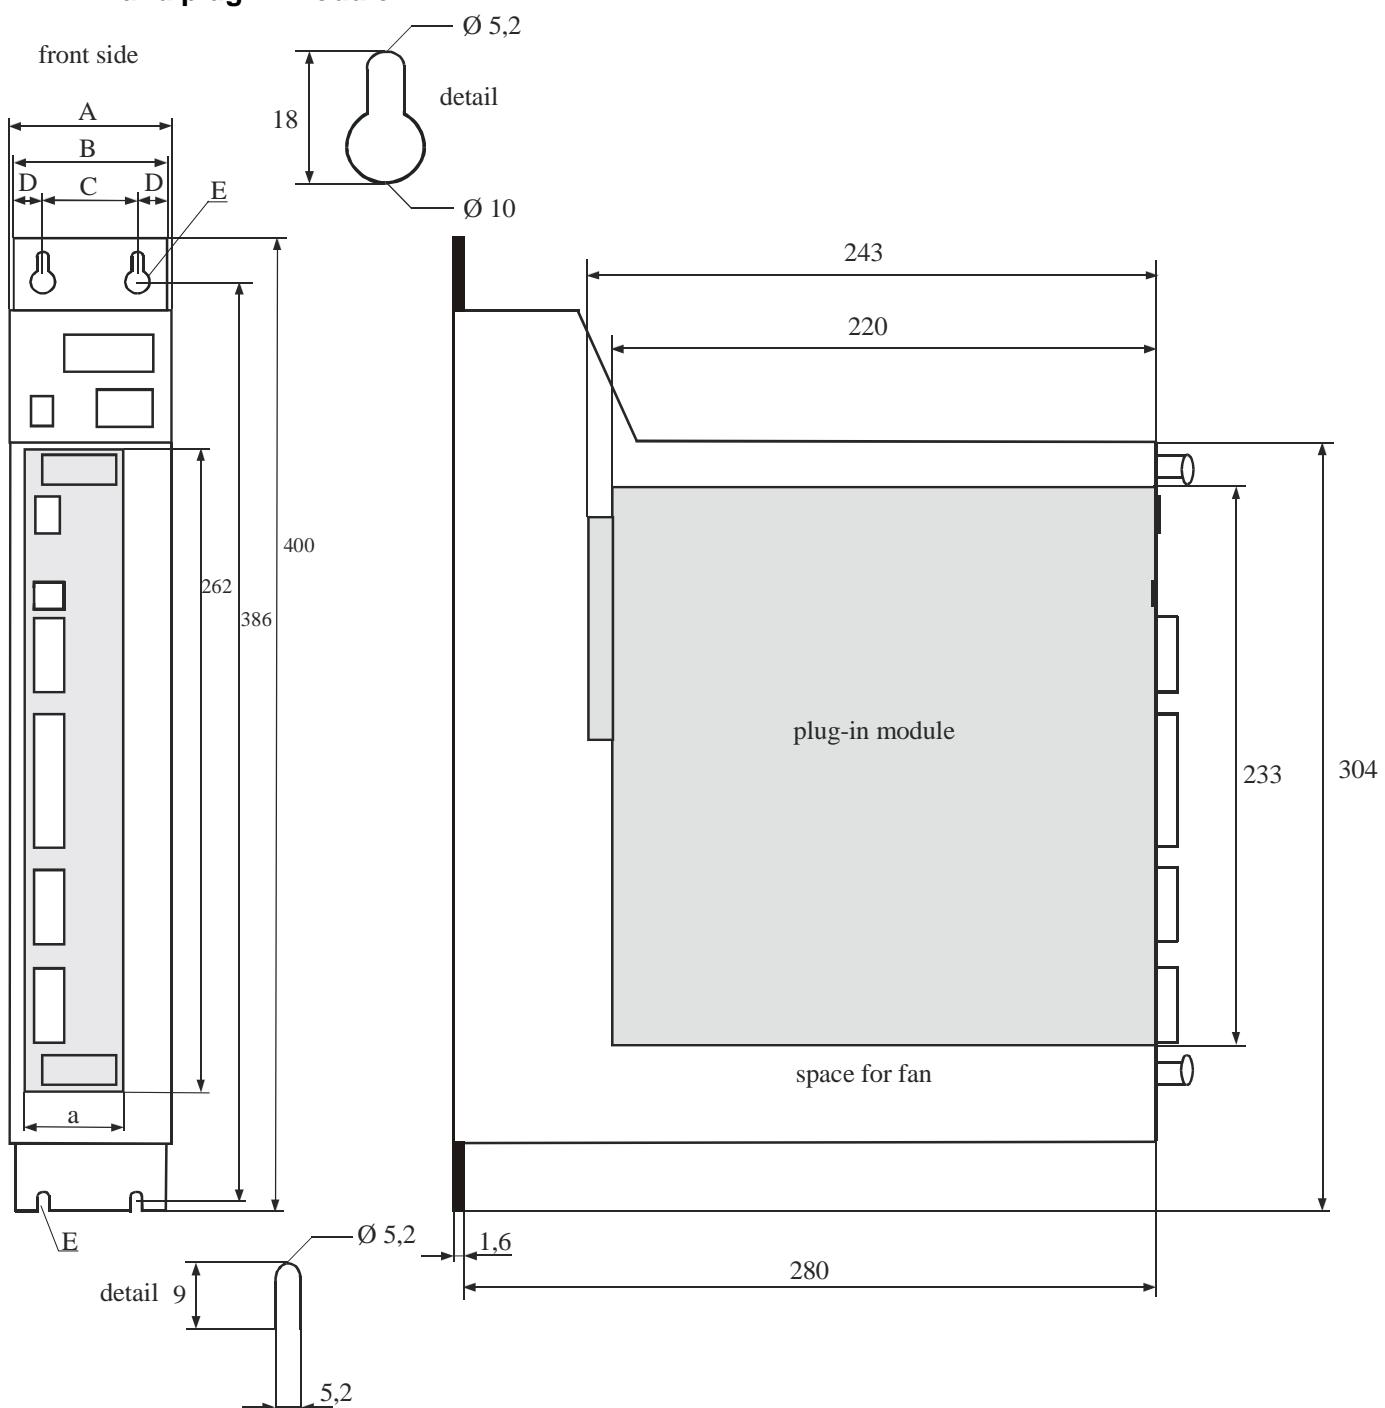

In case of continuous operation in the range of full-load the limits like shown in the diagram have to be respected.

Typical servo applications are not effected by this restriction. (S3-operation: Start/Stop)

## 1.4 Dimensions and layout

### 1.4.1 Dimensions for compact device and plug-in module

	637+/K D6R 02...10	width	637+/K D6R 16...30	width
A	65,0 mm	14 HP	104,6 mm	
B	60,0 mm		100,0 mm	
C	30,0 mm		71,0 mm	
D	14,5 mm		14,5 mm	
a	40,2 mm	8 HP	80,4 mm	16 HP

1 HP ≈ 5,08mm

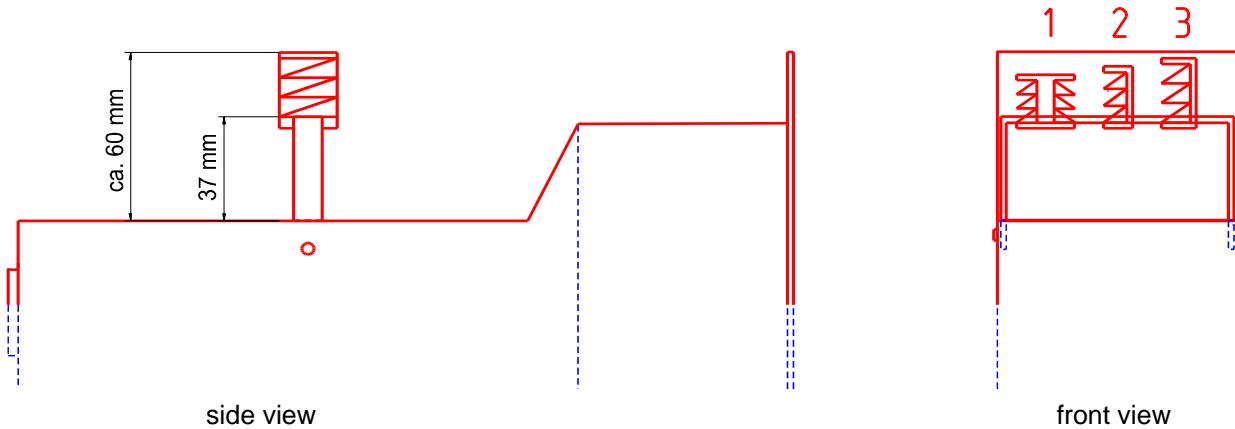

**Important:**

Make sure you need an additional space of approx.  
70 mm on the front side for the signal mating plugs !

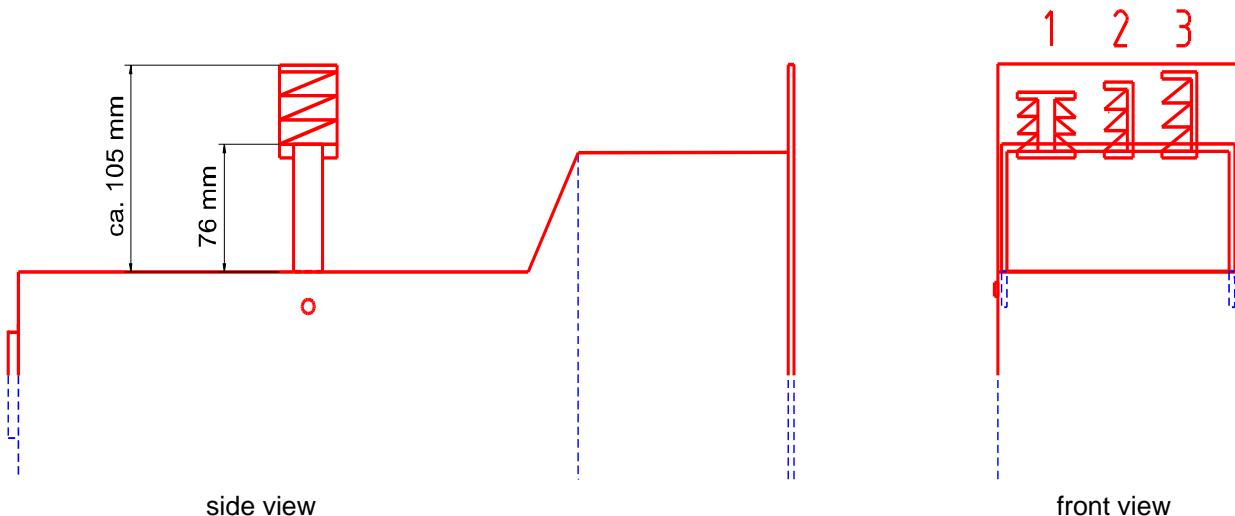

## Dimensions and layout

### 1.4.2 EMC-Clip (optional)

#### 1.4.2.1 for 8 HP drive

#### 1.4.2.2 for 16 HP drive

EMC-Clip for	
Feedback- cable (e.g. Resolver)	1
net cable	2
Motor cable	3

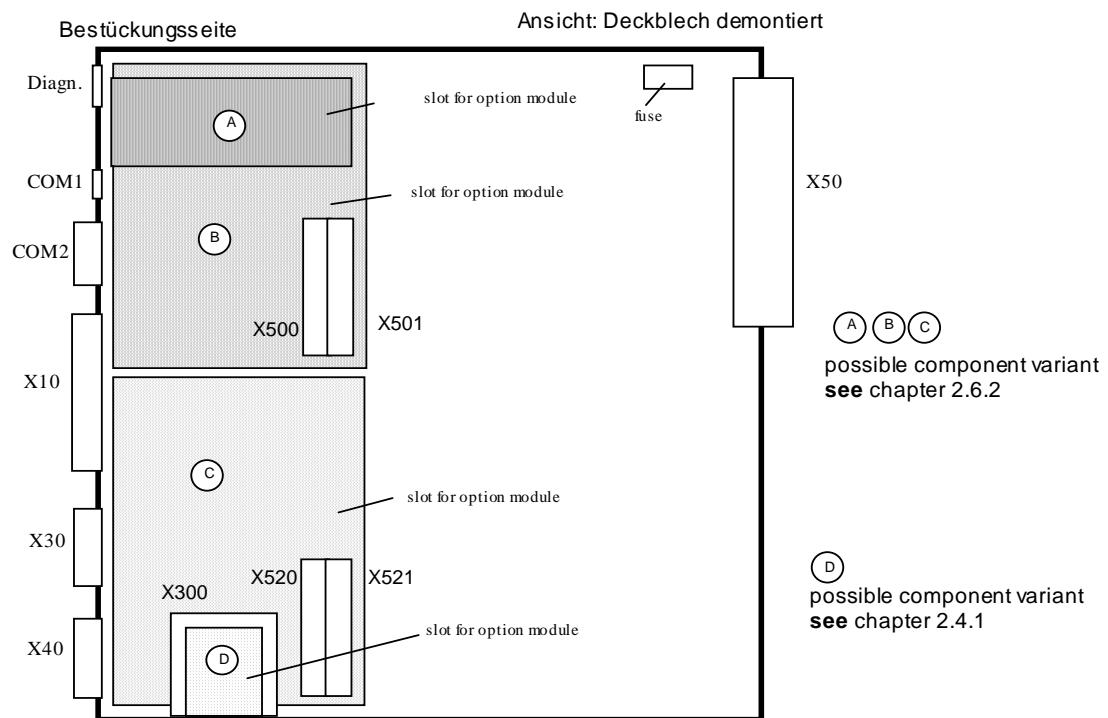

#### meaning:

1,2,3 = cage clamp terminal

## Dimensions and layout

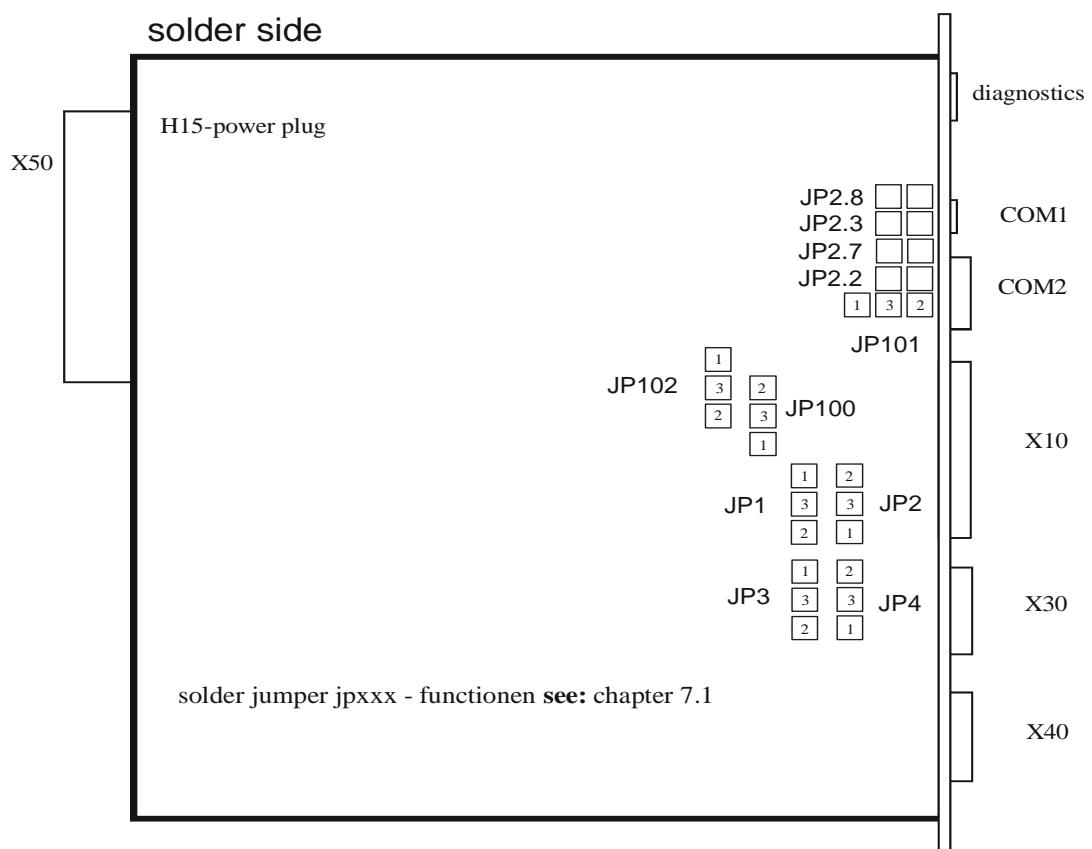

### 1.4.3 Layout

#### 1.4.3.1 Layout of controller board

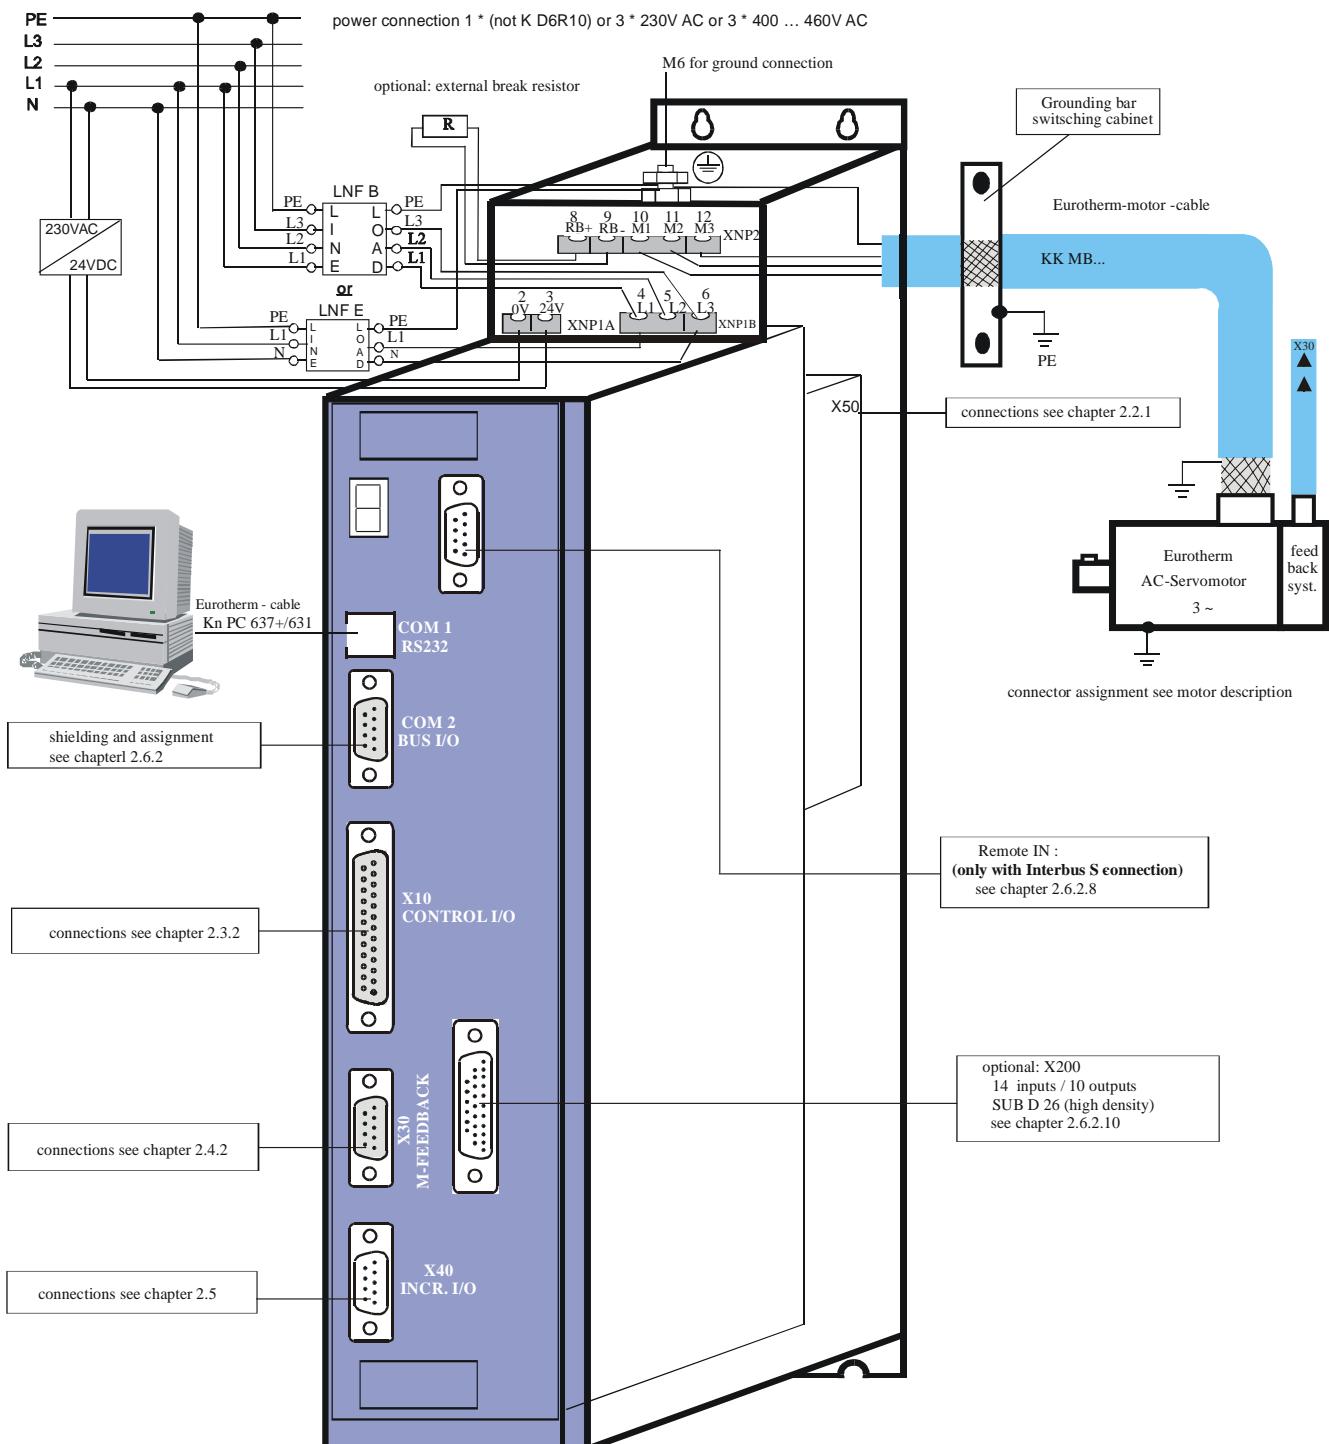

Note: The option modules for the slots A / B / C can only be reached after removing the cooling plate.

#### 1.4.3.2 Layout of power board

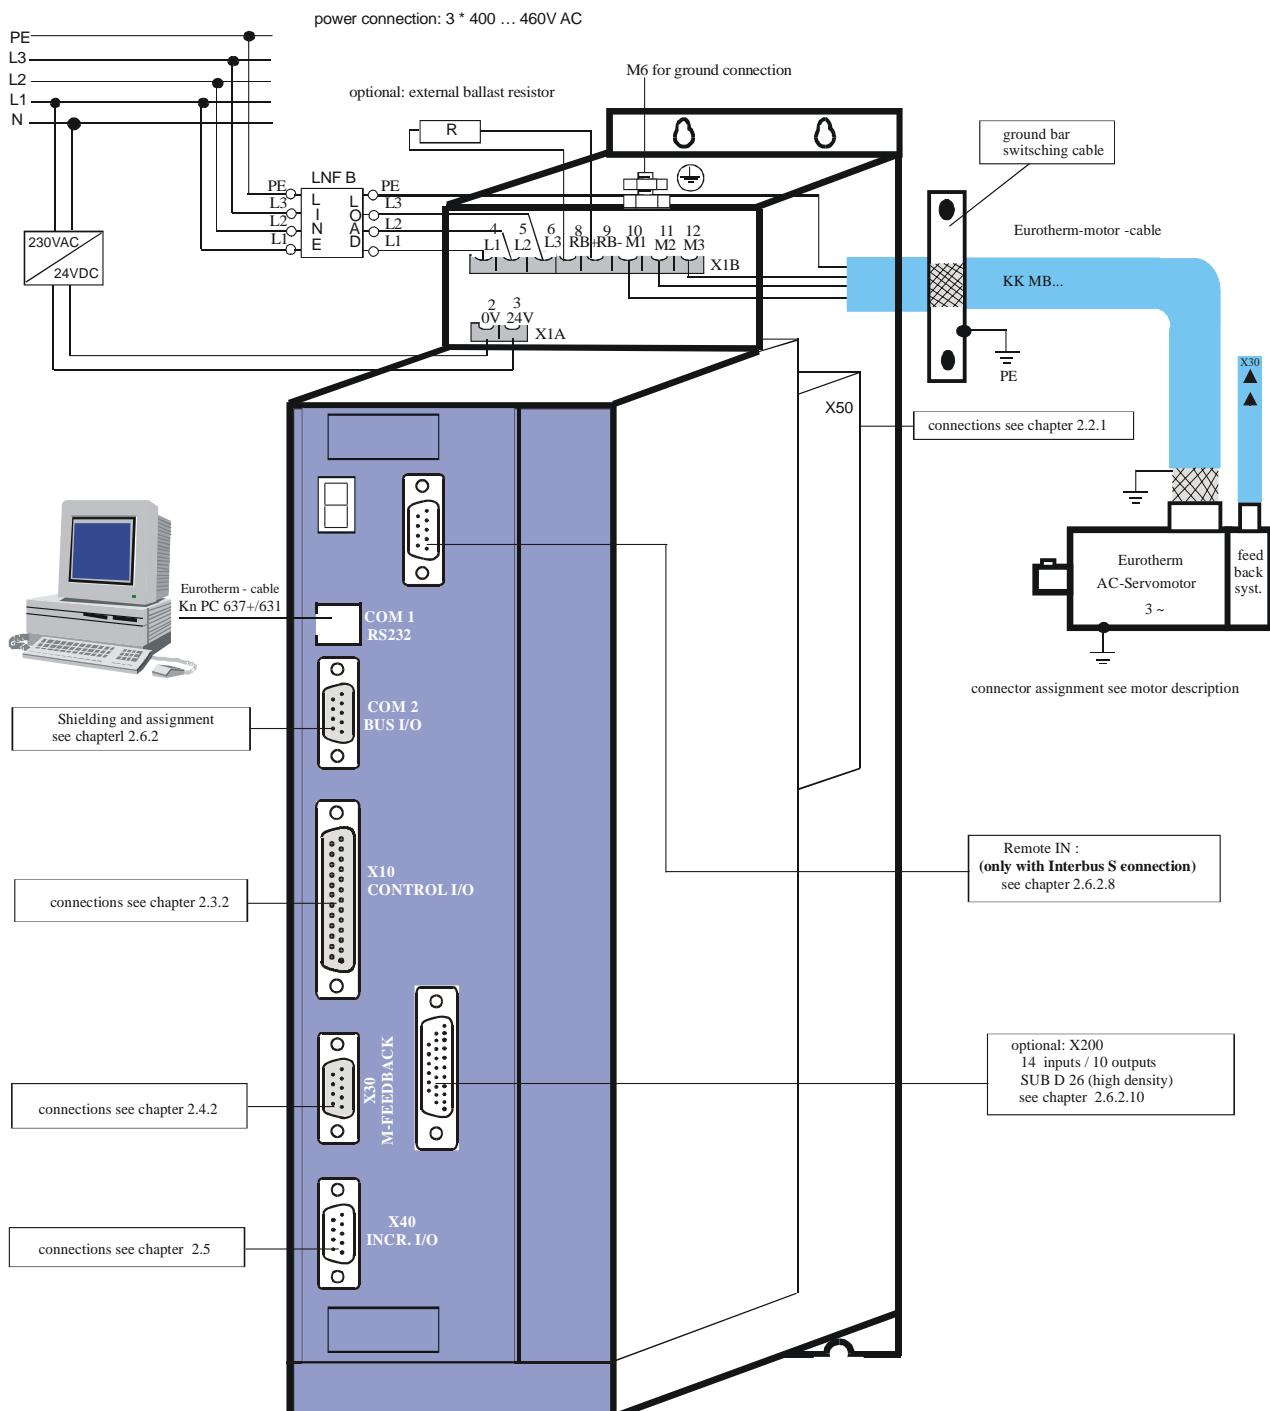

## 2 Connector assignment and functions

### 2.1 General view of connections of the compact device 637+/ K D6R 02 - 10 Width 14 HP

## Connector assignment and functions

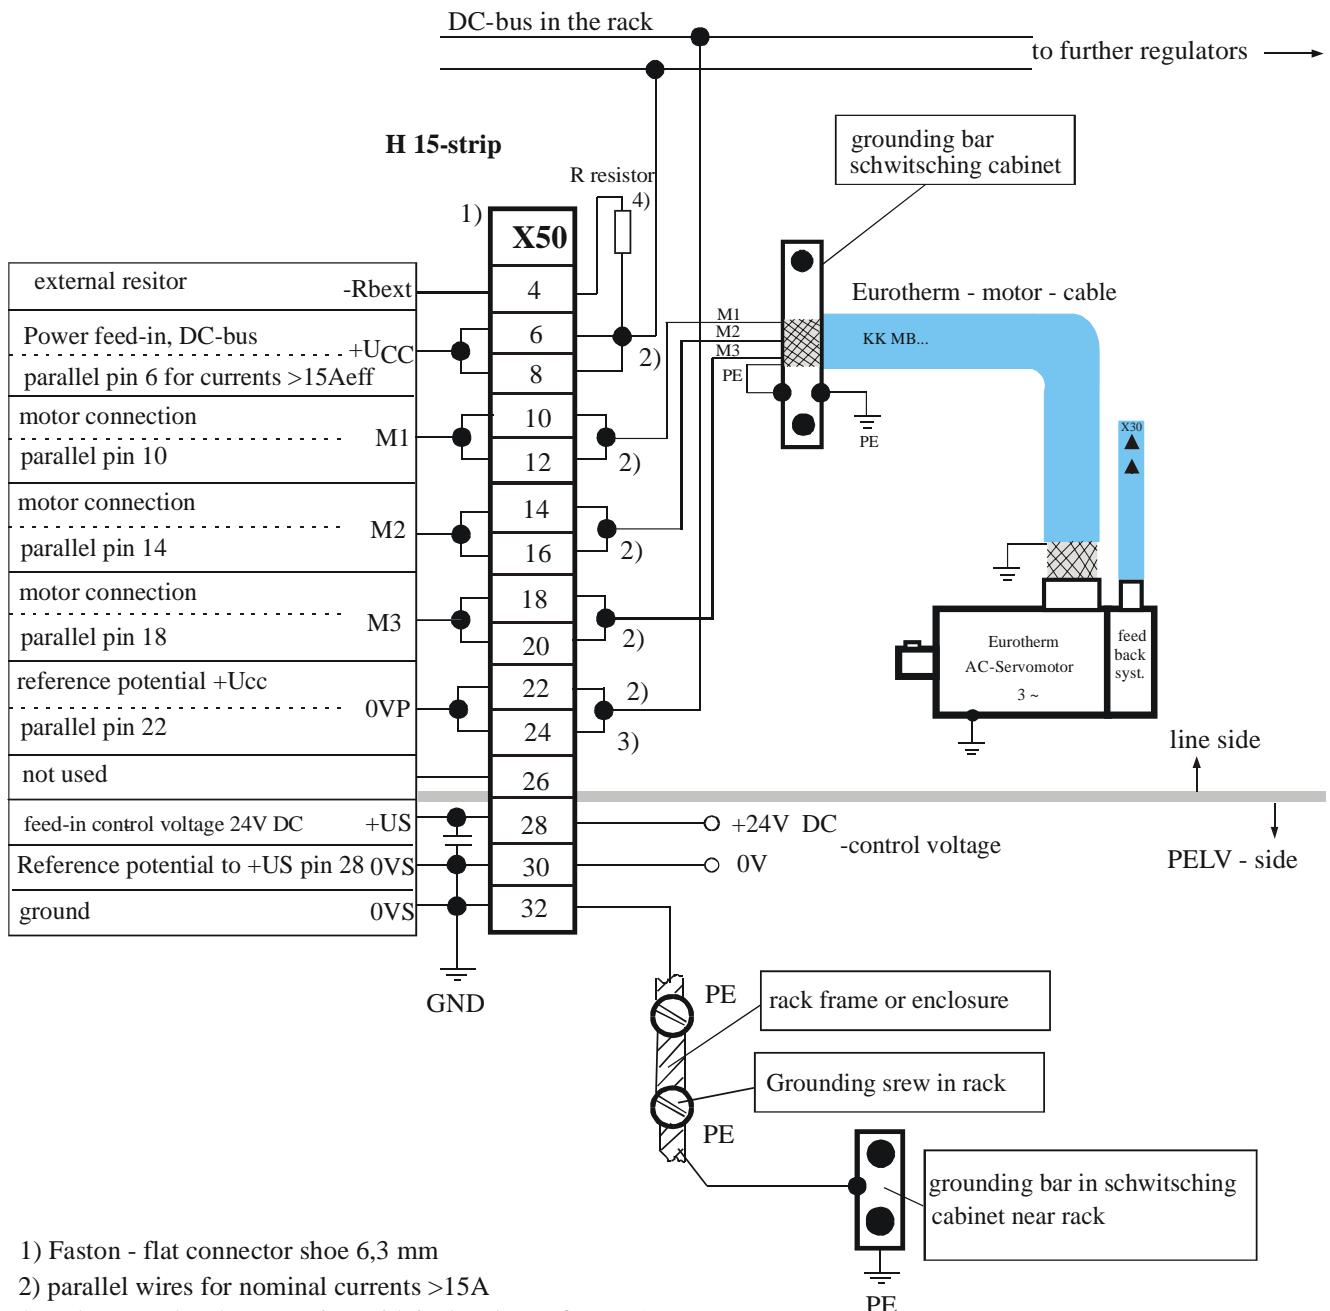

### 2.1.2 General view of connections of the compact device 637+/K D6R 16...30 Width 20 HP

## Connector assignment and functions

### 2.2 Connector pin assignments and contact functions

#### 2.2.1 Power connections for plug-in module 637+/D6R (at the rear of the rack) (H15-multiple pin strip according to DIN 41612)

1) Faston - flat connector shoe 6,3 mm

2) parallel wires for nominal currents >15A

3) only ground wehn operating with isolated transformer !

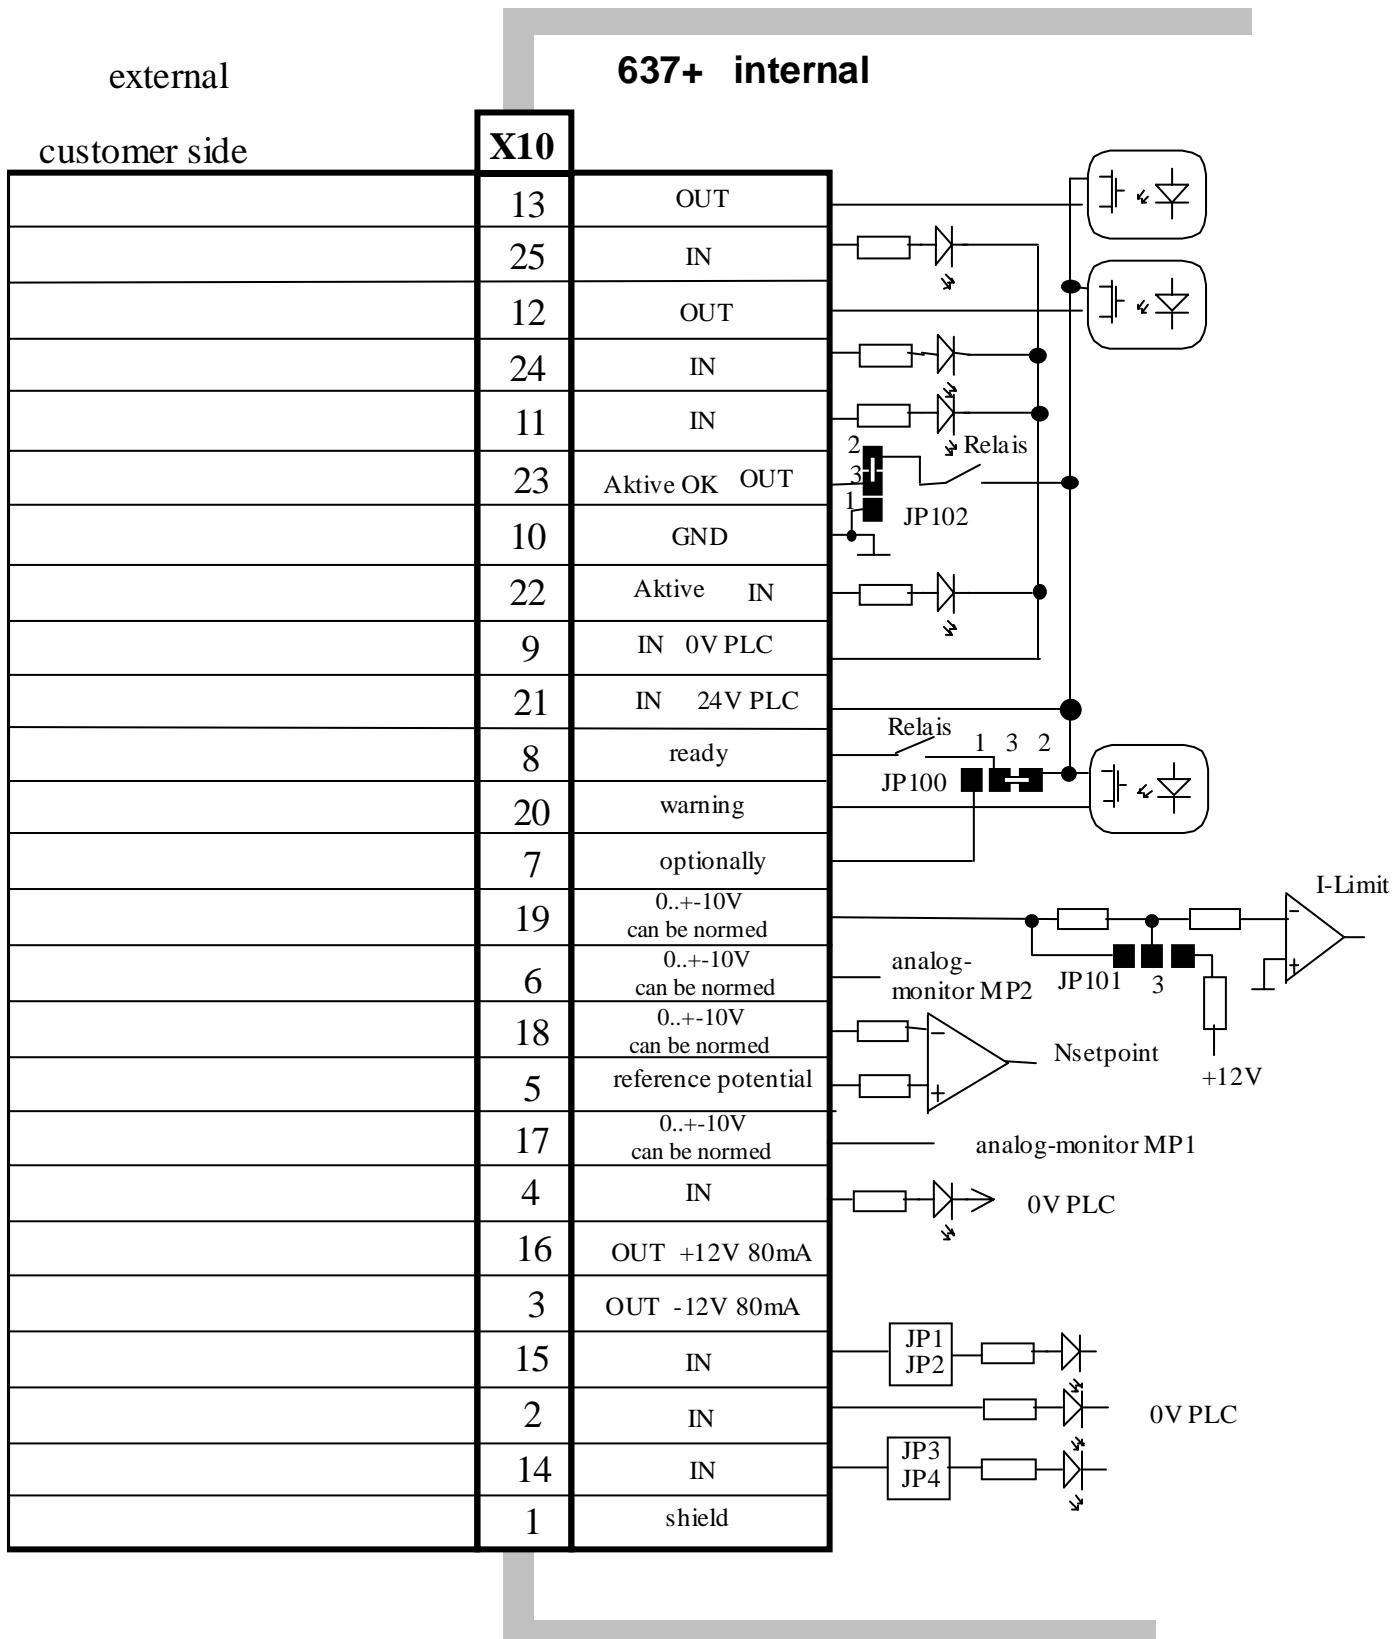

Do not ground wehn operating with autotransformer or directly on mains!

4) resistor, provided that not from power unit NEB ... accessed

## Connector assignment and functions

- 2.3.1 Signal connections  
 2.3.2 Control signal plug X10  
 SUB D25 socket

Complete representation X10

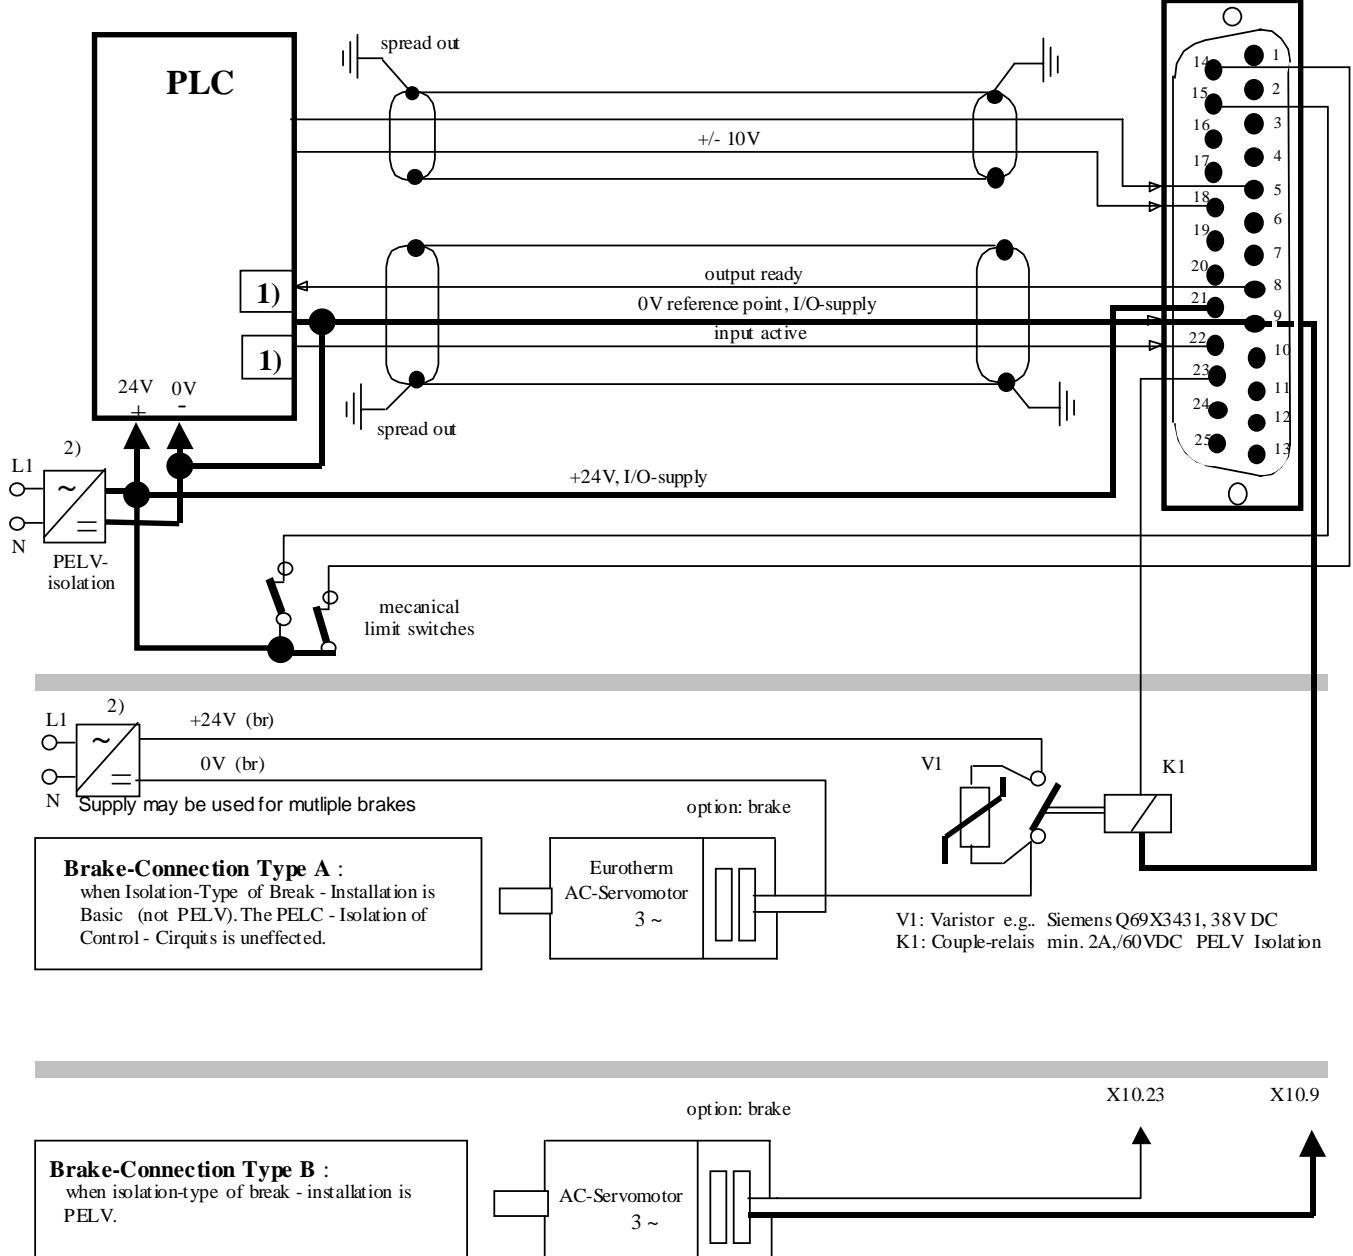

## Connector assignment and functions

### Signal connections

#### Control signal plug X10 SUB D25 socket

Connection example

**drive side**  
control signal plug X10  
model: SUB D 25

1) Security- and supervising logic, to be programmed by user !

2) **IMPORTANT:**

The Power-Supply for the Motor-Brake has to be adapted to the type of Brake. Voltage-Drops caused by long cables also may effect malfunctions of the Brake

## Connector assignment and functions

12	configurable (chapter 3)	OPTO	Output
13	configurable (chapter 3)	OPTO	Output
14	configurable (chapter 3)	OPTO	Input
15	configurable (chapter 3)	OPTO	Input
16	stabilized auxiliary voltage +12V DC; max 80 mA		output auxiliary voltage
17	actual speed value monitor, scalable		MP1 analog output, 0...+-10V
18	nominal speed value; scalable differential referenced to X10.5		Analog input 0...+-10V $R_i = 10 \text{ k}\Omega$
19	Setting of the current limit can be activated and scaled (0..+10V for 0.. $I_{\max}$ )		analog input 0..+10V $R_i = 10 \text{ k}\Omega$
20	configurable (chapter 3)	OPTO	Output
21	Nominal: 24V DC		Supply for outputs
22	H = output stage is active L = output stage inactive	OPTO	input fixed: active
23	configurable (chapter 3)	Relay	output
24	configurable (chapter 3)	OPTO	input
25	configurable (chapter 3)	OPTO	input

Data of the digital inputs and outputs see chapter 11 General technical data

# Connector assignment and functions

## 2.4 Feedback-Sensor-Connection X30

The Feedback-System generates a digital value, representing the rotor-position

**Derived from this value:**

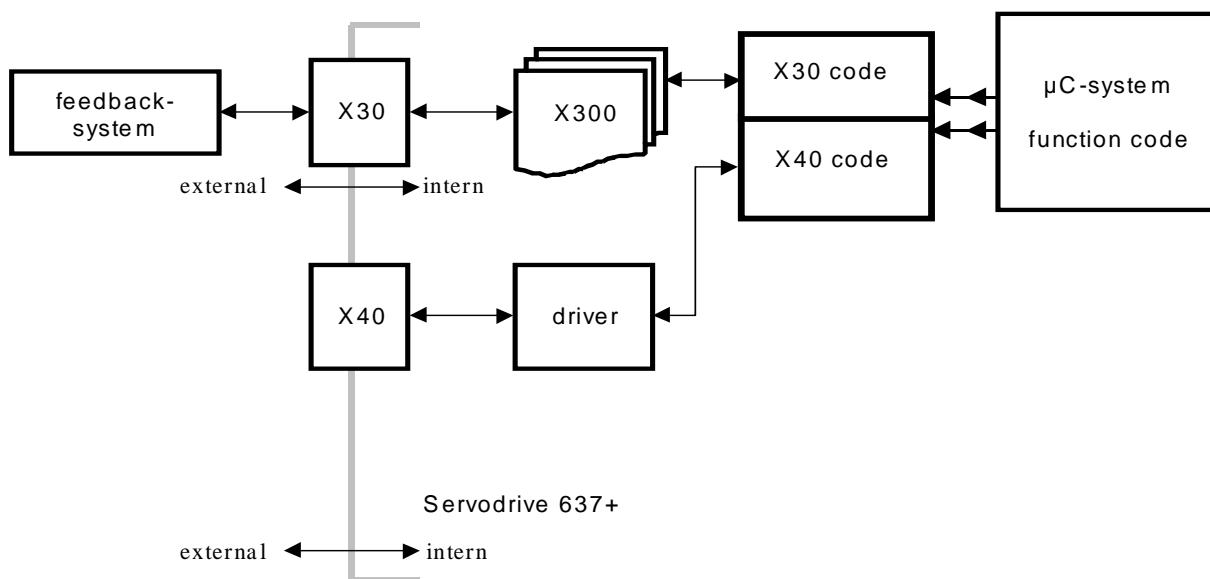

- commutation according to pole pair number
  - actual speed value
  - position value for position regulation

## 2.4.1 Function-Module X300

The Connector X30 is directly related to the Function-Module X300. This Plug-In – Module

(see chapter 1.4.3.1) determines the type of usable Feedback-System.

The 637+ - Drive-System receives flexibility and is adaptable to future requirements.

## **Typen X300:**

X300\_RD2: standard Resolver

X300 HF2: option HIPERFACE®

Further models on request

## Plug and Play

The 637+ identify the model of the module's X300.

The EASYRIDER® Windows – Software loadet the corrcet function code.

You follow the instruction into EASYRIDER® Windows – Software

At function modul RD2 is the fuction code installet (factory default).

## Hints:

The application with the function – modul X300\_HF2 (HIPERFACE®) please observe Documentation 07-02-09-02-D-V0002.

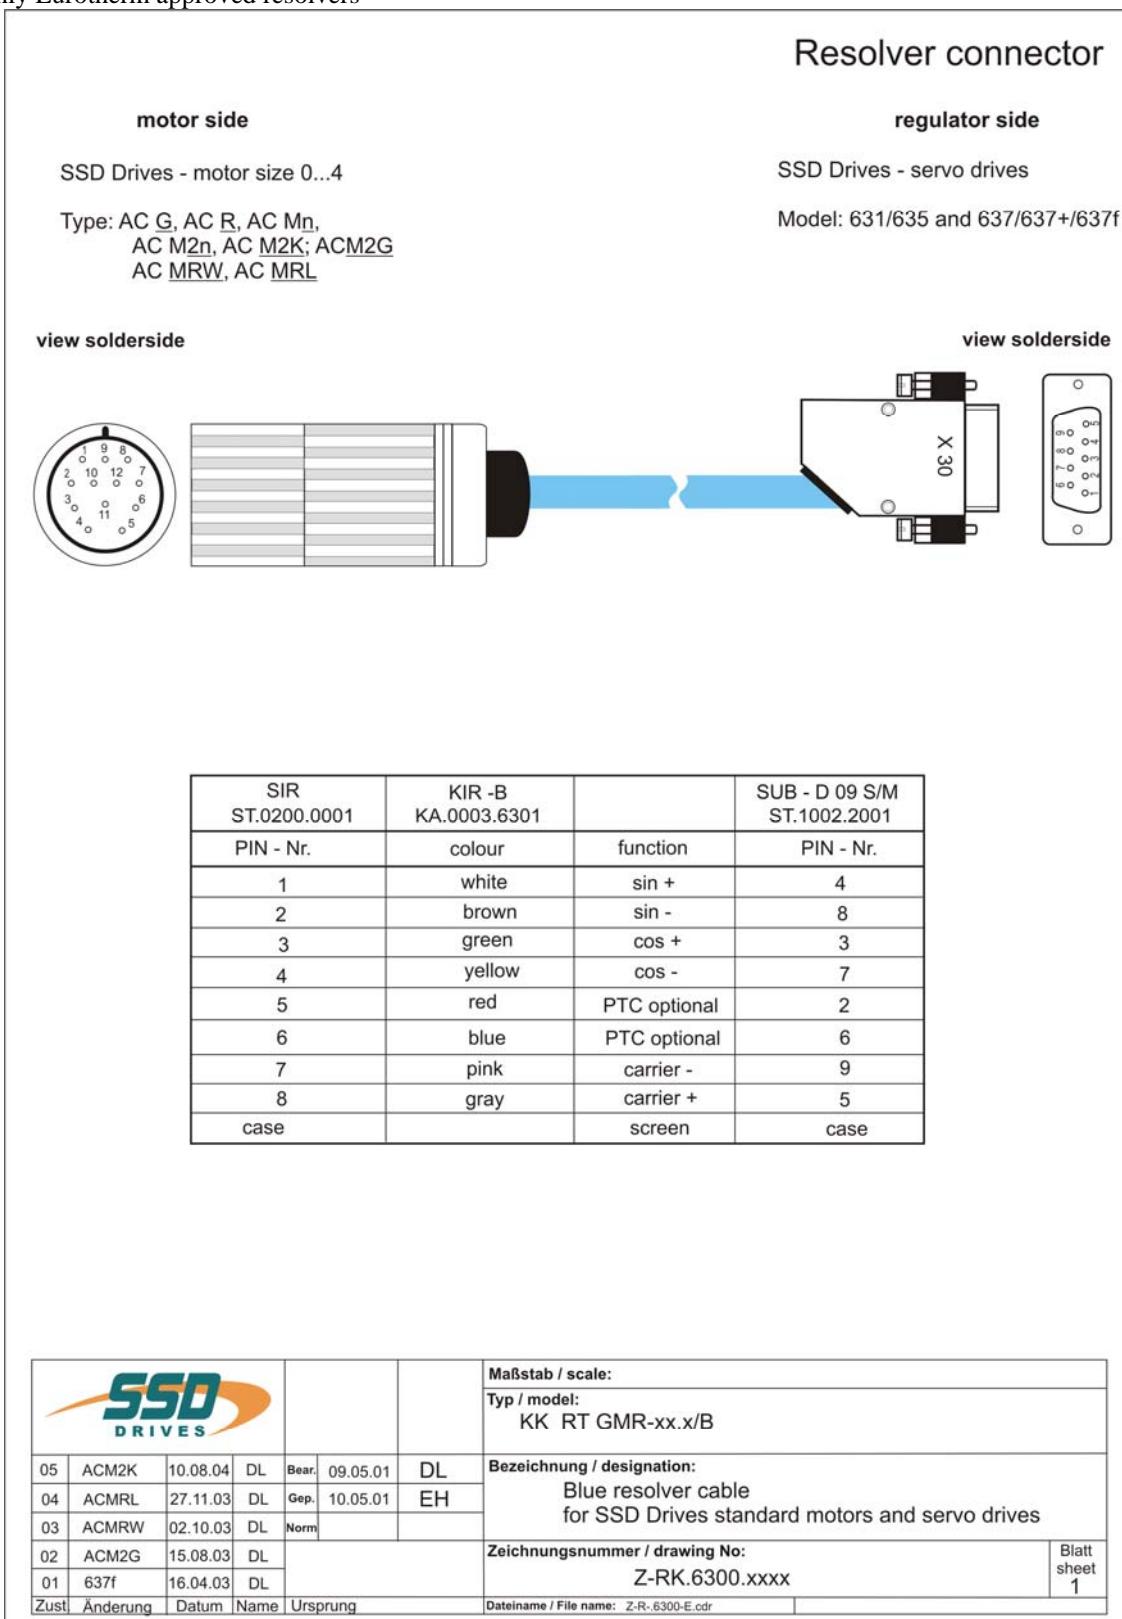

## Connector assignment and functions

### Feedback-Sensor-Connection X30

#### 2.4.2 Resolver connection X30 SUB D 09 socket

Required Function-Module:X300\_RD2 (Standard)

Use only Eurotherm approved resolvers

## Connector assignment and functions

### 2.5 Multi-function X40

#### Description X40

Via a programmable I/O processor, the X40 – Connection can be configured different. (EASYRIDER® Windows - Software)

Standard functions:

- Incremental output
- Incremental input
- Stepper motor - pulse input
- SSI – Interface(under preparation)

The different configuration creates e.g. ideal conditions for synchronous applications.

General data	X40
Plug model:	SUB D 09 male plug
maximum input or output frequency:	200 kHz
maximum cable length connected to galvanical insulated terminals (Encoder, controls)	25 m; for extended distances please contact our engineer
maximum cable length connected to ground-related terminals (other drives, controls)	2 m, take care for good common grounding !
maximum number of signal inputs to one as incremental-output configured device	8
output signals:	driver model MC34C87 or compatible, RS422
differential logic level:	$L \leq 0,5V$ $H \geq 2,5V$
nominal range:	0,0 ... 5,0V
input signals:	receiver model MC34C86 or compatible, RS422
differential input level:	diff min = 0,2V
nominal range:	0,0 ... 5,0V
nominal signal difference:	1,0V
current consumption:	1...4 mA (depending on frequency)

#### Notice:

Master / Slave operation

1 Master maximum 8 Slaves

Condition: Devices directly side by side !

## Connector assignment and functions

### Multi-function X40

#### 2.5.1 Incremental output

Connector pin assignment X40

EASYRIDER® Windows - Software X40 Modus = 0

- Incremental encoder simulation for processing in positioning modules
- Standard: 1024 increments  
further selectable pulse numbers: 2048, 512, 256, 128, 64, 4096 (ab Firmware 6.15)

Pin	Function	Designation
1	Channel B	B
2	Channel B inverted	/B
3	Shield connector	Shield
4	Channel A	A
5	Channel A inverted	/A
6	Reference *	GND
7	Channel Z inverted zero impulse	/Z
8	Channel Z, zero impulse	Z
9	Supply voltage output max. 150 mA	+ 5 VDC

#### Design rule:

The capability of input-frequency of any connected device must meet at least the value of pulse outputs on X40..

n = max. speed (rpm)

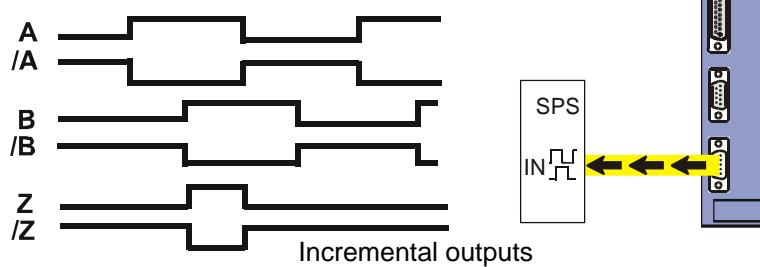

x = increments e.g. 1024

f = output frequency at X40.1,2,4,5

$$\text{Formula: } f = \frac{1,2 * (n * x)}{60} [\text{Hz}]$$

Example: n = 4000 1/min

$$f = \frac{1,2 * (4000 * 1024)}{60} = 81920 \text{ Hz}$$

## Connector assignment and functions

### Multi-function X40

#### 2.5.2 Incremental input

EASYRIDER® Windows - Software X40 Modus = 1

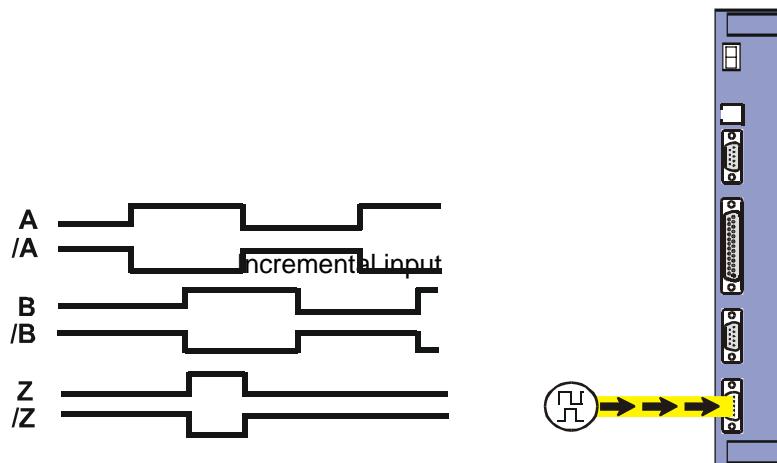

Parameter area of the input signals:

10...1000000 increments

Pin	Function	Designation
1	Channel B	B
2	Channel B inverted	/B
3	Shield connector	Shield
4	Channel A	A
5	Channel A inverted	/A
6	Reference potential *	GND
7	Channel Z inverted zero impulse	/Z
8	Channel Z, zero impulse	Z
9	Supply voltage output max. 150 mA	+5 VDC

**Note:**

The operation of incremental encoders via long cables may cause a voltage drop of the encoder power supply. We suggest the use of external supply if necessary.

## Connector assignment and functions

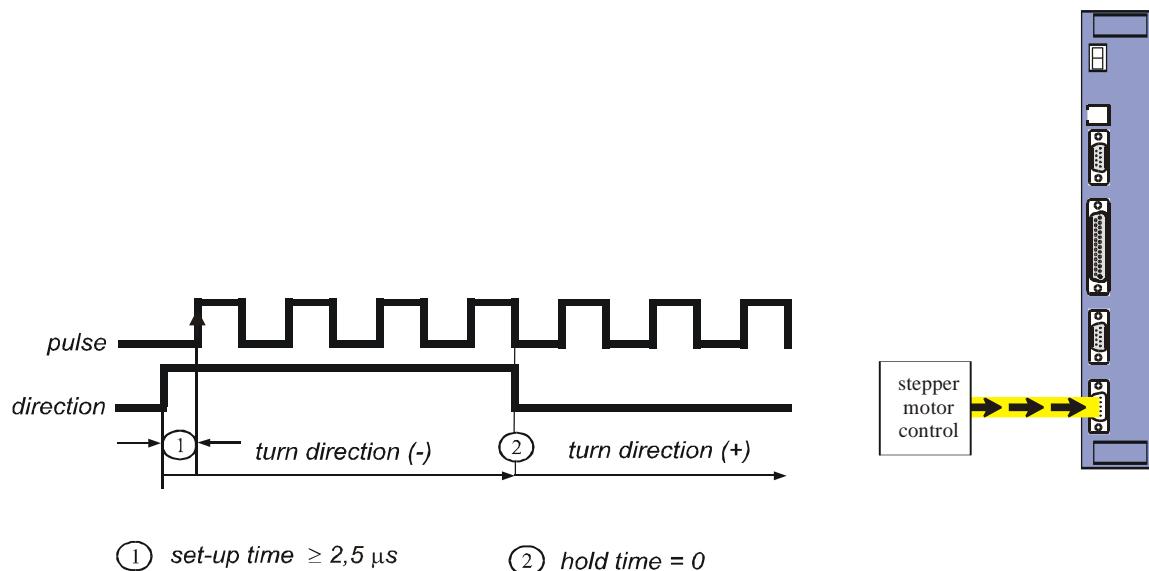

### Multi-function X40

#### 2.5.3 Stepper motor input

pulse / direction

EASYRIDER® Windows - Software X40 Modus = 2

Pin	Function	Designation
1	output: drive active inverted	/READY
2	output: drive active	READY
3	Shield connector	Shield
4	Pulse inverted	/P
5	Pulse	P
6	Reference potential	GND
7	Direction inverted	/R
8	Direction	R
9	Supply voltage output max. 150 mA	+5 VDC

## Connector assignment and functions

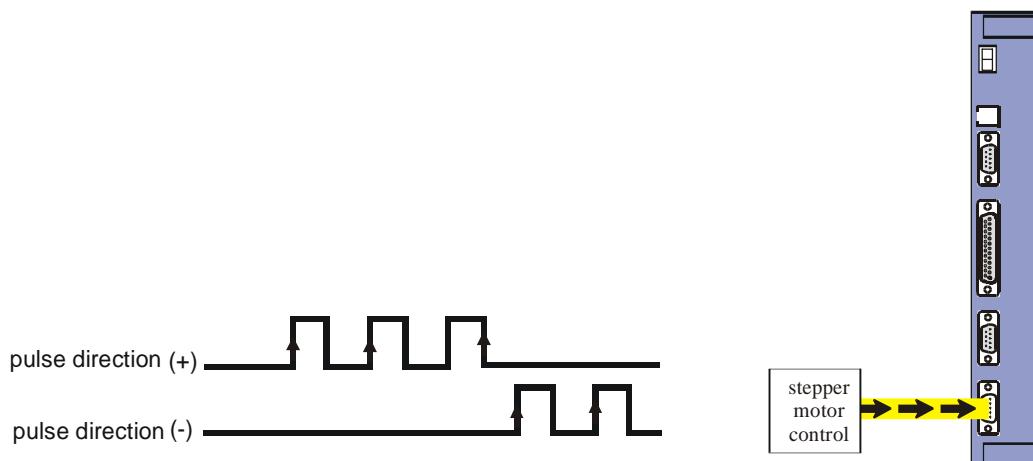

### Multi-function X40

#### 2.5.4 Stepper motor input

pulse positive / negative

EASYRIDER® Windows - Software X40 Modus = 3

Pin	Function	Designation
1	output: drive active inverted	/READY
2	output: drive active	READY
3	Shield connector	Shield
4	Pulse direction (-) inverted	/P-
5	Pulse direction (-)	P-
6	Reference potential	GND
7	Pulse direction (+) inverted	/P+
8	Pulse direction (+)	P+
9	Supply voltage output max. 150 mA	+5 VDC

## Connector assignment and functions

### Multi-function X40

#### 2.5.5 SSI-Encoder Interface (under preparation)

EASYRIDER® Windows - Software X40 Modus = 4 (13 bit)

EASYRIDER® Windows - Software X40 Modus = 5 (25 bit)

PIN	Function	Designation
1	serial Data from SSI-Encoder, GRAY-Code up to 25 bit Inverted	/DATA
2	serial Data from SSI-Encoder GRAY-Code up to 25 bit	DATA
3	Shield connector	Shield
4	Clock-Output, inverted Standard-Frequenz: 208 kHz	/TAKT
5	Clock-Output Standard-Frequenz: 208 kHz	TAKT
6	Reference potential	GND
7	do not connect	
8	Output to Encoder: Countigdirection, Low = Clockwise	CCW
9	Supply voltage output max. 150 mA If other Data required: a) Use of X300-Module b) External Supply	+5 VDC

TAKT and /TAKT twisted pair

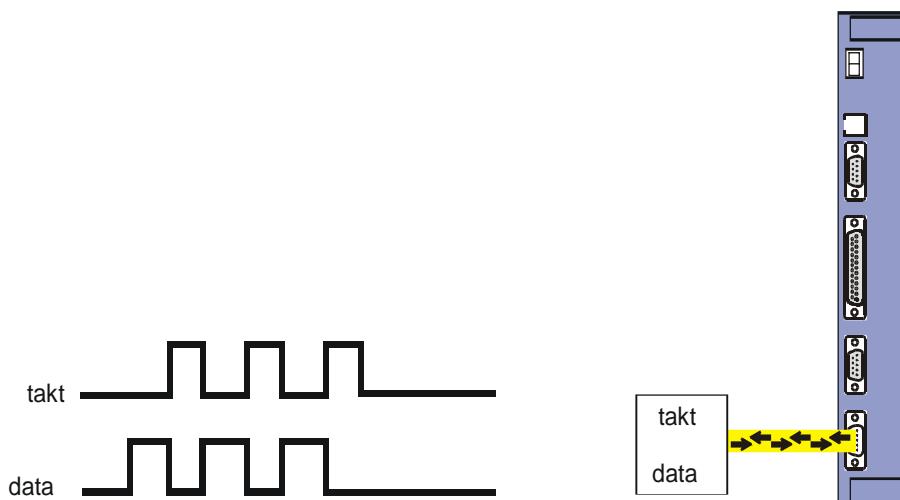

DATA and /DATA twisted pair

Cable screened, Screen connected to Ground at both sides

max Cable-Length: 250m

**Note:**

For further informations about SSI (Synchronous Serial-Interface), please refer to the documentations of appropriate suppliers.  
(e.g.: Stegmann or TWK)

## Connector assignment and functions

### 2.6 Digital interfaces

#### 2.6.1 Service interface COM1 (RS232)

standard

Functions:

- Supporting all diagnosis and setup tasks
- Connection to your PC is made with the Eurotherm communication cable KnPC/D
- Communication is made via the Eurotherm operating program (EASYRIDER® Windows - Software)

Com RS232	PIN	Function drive side	PIN	RS232 PC-Side
4-pole Modular-Jack				SUB D 09- socket (View to solder-side)
RXD	1	Receive Serial Data	3	TXD
TXD	2	Transmit Serial Data	2	RXD
	3	Do not connect		
GND	4	GND	5	GND

Cable Ready for Use: RS232 Service- Connector	model	Order Number.	
Drive → PC	Kn PC 637+/631 – 03.0	KK.5004.0003	

#### Notice:

The service interface RS232 is not galvanically separated and should not be planned for this reason as a operating interface ("firm wiring")!

The Line-Connection of the PC must be close to the Drive to achieve operation related to a common ground.

## Connector assignment and functions

### Digital interfaces

#### 2.6.2 Fieldbus interface COM2

Option module (SUB D09 socket)

Many different functions can be implemented using optional option module.

Layout, see chapter 1.4.3

Overview:

modul- designation	interface	galvanic seperation	design
RP 232	RS 232	-	A
RP 422	RS 422/485	-	A
RP 485	RS 422/485	X	A
RP CAN	CAN	X	A
RP PDP	Profibus DP	X	B
RP SUC	SUCOnet K	X	B
RP IBS	<sup>1)</sup> Interbus S	X	B
RP DEV	DeviceNet	X	B

<sup>1)</sup> additional plug Interbus Rem. IN (SUB D)

#### 2.6.2.1 additional In-/Outputs

modul- designation	Inputs	Outputs	connection via	design
RP EA5	<sup>2)</sup>	5	2	COM2
RP EAE		14	10	X200

<sup>2)</sup> no Fieldbus possibility (Interface)

#### Caution:

The connections COM2 and X30 are implemented via SUB D09 socket.

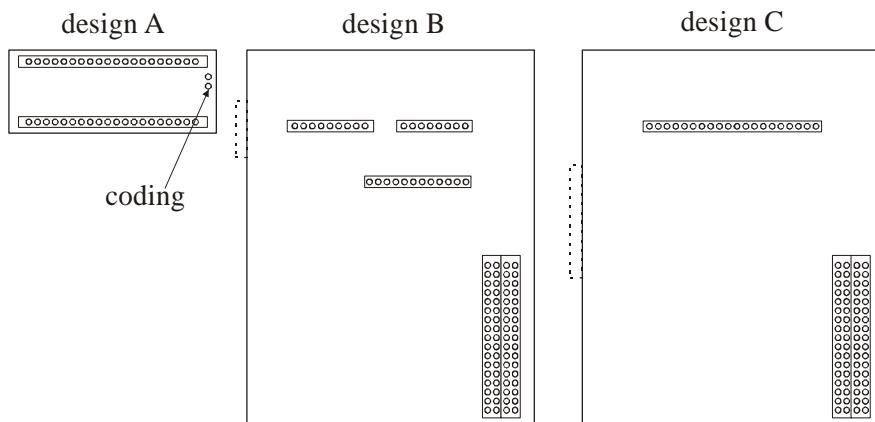

The customer have to be guaranteed that an interchanging is not possible!

The soldering jumper JP2.8, 2.3, 2.7, 2.2 have to be switched dependent on Configuration Interface.  
See chapter 7.1 (in plant adjusted)

### 3 Operating modes

The preselection of the device functions is carried out by choosing the operating modes 0...5 according to the following table, **see chapter 3.1, (EASYRIDER® Windows - Software)**.

Each operating mode allows the assignment of different in- and output functions (F0..F5).

Betriebsart	Sollwertquelle	Hinweise zur Auswahl der Betriebsart
0 1 2	analog (X10.5/18)	switchable the operating modes 1 and 2 by input X10.24 speed control analog torque controller analog
3	analog (X10.5/18) / digital	simple applications with requirement of switching between position and speed control position controller (input X10.24) handling like operating mode 4
4	digital or analog in acc. to parameter set	general position-controlled systems. Up to 10 positions can be stored under identifier-numbers and activated like shown.
pos. selection (Nr 0..9)		<p>function F2 datd 2 ... 2<sup>0</sup> 4</p> <p>input start function F2 X10.2</p> <p>axis moves to selected position-number</p> <p>output position reached function F0 X10.12</p> <p>t1 = 2 ms minimum      t2 = 2 ms minimum</p> <p>The diagram shows four horizontal lines representing signals over time. The top line is labeled '0' at the left and '4' at the right. It has a cross symbol at its midpoint. The second line is labeled 'input start' and 'function F2 X10.2'. The third line is labeled 'axis moves to selected position-number'. The bottom line is labeled 'output position reached' and 'function F0 X10.12'. Below the bottom line, there are two time intervals labeled 't1' and 't2' with arrows indicating their duration. A shaded gray rectangle is positioned between the third and fourth lines during the time interval t2.</p>
5	digital or analog in acc. to programming or via digital communication (e.g. fieldbus)	simple to complex systems using instructions BIAS (up to 1500 command blocks) PLC - functions for further informations: see chapter 13.1 and 13.2

## Operating modes

### 3.1 Operating modes and pin functions

Available pins number	operating modes

## 4 Mechanical installation

### 4.1 Mounting

Eurotherm digital servo drives may be installed only in a vertical position to guarantee the best air circulation for the cooling ribs of the heat sink. Vertical installation above other drive racks or above other heat producing devices can lead to overheating. In addition the drives are to be operated exclusively in Eurotherm racks or the compact enclosure respectively.

### 4.2 Control cabinet - mounting

Installation should be carried out only in a control cabinet in which the inside must be free from dust, corrosive fumes, gases, and all liquids.

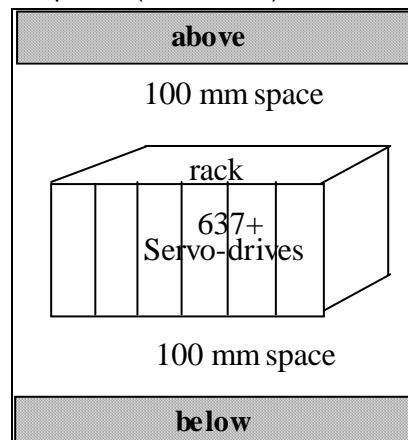

Make absolutely sure that the condensing of evaporating liquids including atmospheric moisture, is avoided. Should the digital servo drive be installed in a place where condensation is likely, a suitable anticondensation heater must be installed. The heater must be SWITCHED OFF during normal operation.

Automatic switch off is recommended

Eurotherm-digital servo drives should not be installed in areas which have been classified as dangerous, if they have not been installed in an approved enclosure in accordance with regulations and checked.

Make sure, there is enough cooling and space ! (see sketch)

- only horizontal !
- on the side  
no distance is required

#### General rule:

It is better to place heat-producing devices low in an enclosure to support internal convection and to spread the heat. If placing such devices up high is unavoidable, enlarging the upper dimensions at the expense of height or installing fans should be considered.

### 4.3 Cooling

The digital servo drives are protected against damages caused by overheating.

There is a thermal sensor installed on the heat sink. When the temperature rises to >95°C, the drive is automatically switched off. This setting cannot be changed.

Make sure a cabinet of proper size is selected for adequate air circulation

**If the device becomes operated in a not ventilated device, the case volume of the specified control cabinet must be calculated in accordance with the following table !**

Gerät	Volumen/Schalschrank
637+/D6R02...D6R10	0,12 m <sup>3</sup>
637+/D6R16...D6R30	0,25 m <sup>3</sup>

For more exact information, please, address to the control-cabinet manufacture

## 5 Electrical installation

### 5.1 Safety

The voltages carried by power supply cables, motor cables, connectors, and certain parts of the drive can cause serious electric shocks and even death

### 5.2 The danger of electric shocks

**CAUTION !**

Risk of electrical shock, wait 3 minutes after switching off, for discharging the capacitors.

Disconnect Eurotherm plug-in units from mains before working on them. A period of **three minutes must** pass after switching off so that the internal capacitors can discharge completely. Until the discharge time is over, there can be dangerous voltages in the module !

Persons, which monitoring or carrying out electrical installation and maintenance must be adequately qualified and schooled in these activities.

### 5.3 Danger areas

The use of variable speed drives of all kinds can invalidate the certification for dangerous areas (apparatus group and/or temperature class) of explosion-protected motors. Inspection and certification for the complete installation of servo motors and electronic components **must** be obtained.

### 5.4 Grounding, safety grounding

The grounding impedance must meet the requirements of local industrial safety regulations and should be inspected and checked at appropriate and regular intervals

#### 5.4.1 Ground connections

It is recommended to attach a ground bus of high conductivity copper as near as possible to the servo-rack or regulator modules in order to minimize the length of the cable connections.

The recommended dimensions are:

**Thickness: d = 5 to 6 mm**

Length (m)	Width (mm)	d	b	1
< 0,5	20			
0,5 < 1,0	40			
1,0 < 1,5	50			

Ways of raised discharge currents > DC 10mA resp. > AC 3,5mA the PE-Bolt of the drive has to be connected to PE using copper-cable minimum 10mm<sup>2</sup> !

### 5.5 Short-circuit capability and discharge currents

Due to the working-principle of servo drives there may discharge currents to PE exceeding DC 10mA resp. AC 3,5mA.

Suitable for use on a circuit capable of delivery not more than 5000 RMS symmetrical amperes 505V maximum. (Note according to UL508C)

## Electrical installation

<b>filters</b>		only for use in earth referenced supplies(TN). Current drain to PE !						
<b>filter models</b>		Orientation: Table of compact units. Further models: see separate manual						

1) recommended for UL-requirements: Bussmann Type FRS-R, 600V, use only UL-approved fuse-holders !

2) recommended, Klöckner Moeller for instance

3) Measurement of conducted emissions only

4) for applications with continuous load: see notes in chapter 5.7

## Electrical installation

### 5.7 Correction of supply current

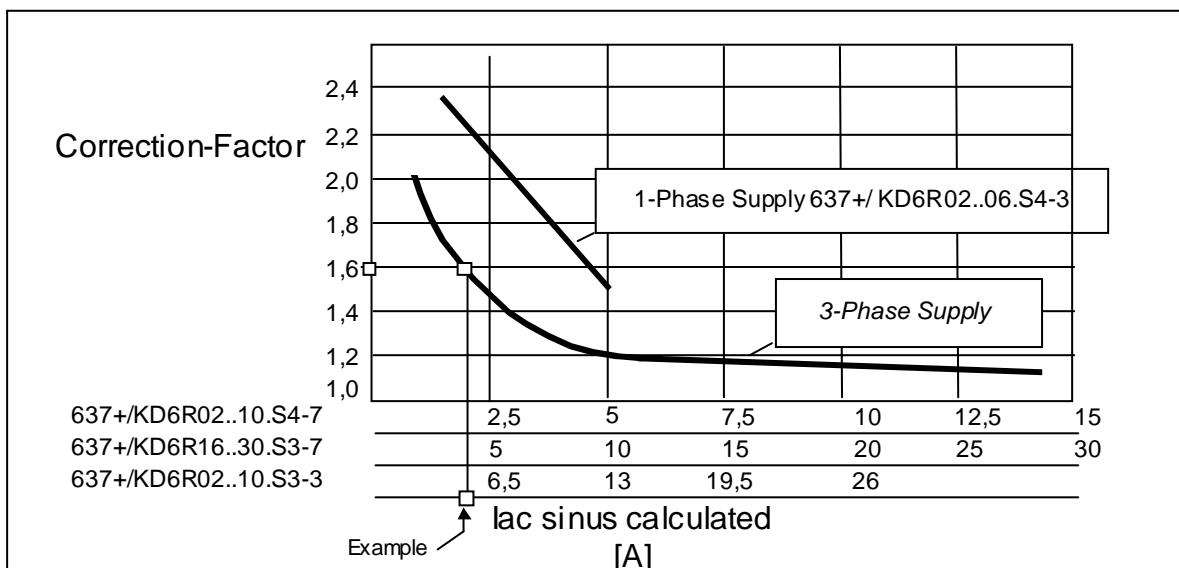

#### Attention in case of continous load:

Due to the capacitive input impedance of DC-Bus, the input current is deformed.

This guides to RMS -values higher than the sinus-based calculated values. Fuses, contactors and line filters have to be selected in respect to this effect.

In typical servo application with Stop/Go-operation (S3-Operation), the rating to nominal data will be sufficient.

In other cases, the value has to be corrected using the following diagram.

#### Example:

Drive type 637+/KD6R16.S4-3 is supplied by AC 230V 3-ph.

Output data to the motor: AC 200V 16A

Output-power:  $P_{out} = 200V \times 16A \times 1,73 = 5,54 \text{ kW}$

This output-power must be generated by:

calculated supply-current  $I_{ac \text{ sinus}} = 5,54\text{kW} / (230V \times 1,73) = 13,9 \text{ A}$

Correction-Factor from diagram: 1,6

RMS. Supply-Current  $I_{eff} = I_{ac \text{ sinus}} \times 1,6 = 22,3 \text{ A}$

#### Result:

All supply-equipment has to be selected in respect to the enhanced current.

## Electrical installation

### 5.8 Brake resistor

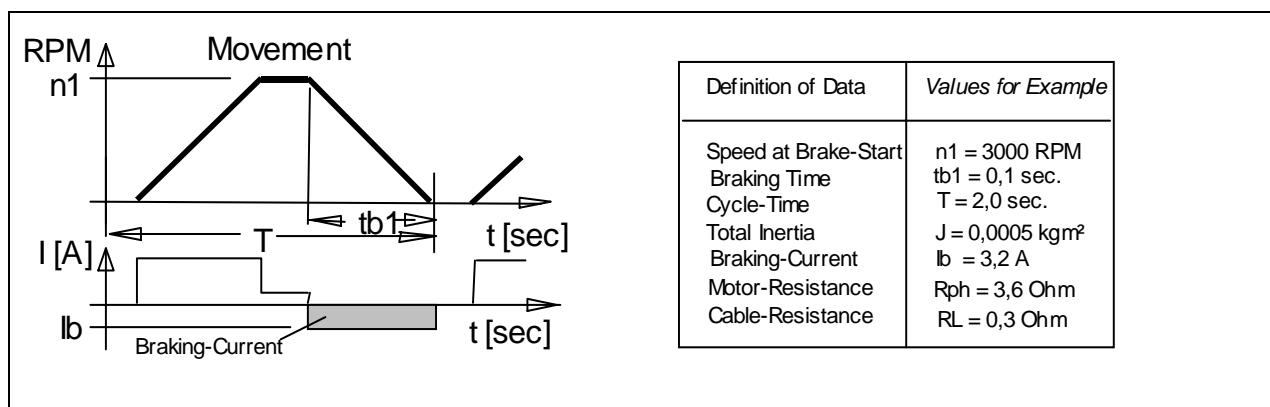

#### 5.8.1 Selection of the brake resistor

The energy of a moving system flows back to the Drive. The DC-Bus capacitors are able to take a small value. The rest has to be converted to heat by a resistor.

Switching of this brake resistor depends on the DC-Bus voltage.

The load of the resistor is simulated and supervised electronically (EASYRIDER® Windows - Software).

Peak power ( $P_{max}$ ) and continuous power ( $P_d$ ) ratings have to be sufficient to meet the requirements of the application.

Calculation	
Step 1	example
<b>Calculation of brake-power</b> (Approximation. Capacitor-load, friction-and drive-losses neglected)	
Power of motion: $P_{kin} = 0,0055 * J * n_1^2 / t_{b1} \text{ [W]}$	$P_{kin} = 0,0055 * 0,0005 * 3000^2 / 0,1$ $P_{kin} = 247 \text{ W}$
Motor-losses: $P_{vmot} = I_b^2 * (R_{ph} + R_L) \text{ [W]}$	$P_{vmot} = 3,2^2 * (3,6 + 0,3)$ $P_{vmot} = 40 \text{ W}$
<b>Cont. Power:</b> $P_d = 0,9 * (P_{kin} - P_{vmot}) * t_{b1} / T$ [W]	$P_d = 0,9 * (247 - 40) * 0,1 / 2$ $P_d = 9,3 \text{ W}$
<b>Peak-Power:</b> $P_{max} = (1,8 * P_{kin}) - P_{vmot} \text{ [W]}$	$P_{max} = (1,8 * 247) - 40$ $P_{max} = 405 \text{ W}$
used units:	
$J$ total inertia [ $\text{kgm}^2$ ]	
$n_1$ speed at Brake-Start [RPM]	
$t_{b1}$ braking time [Sec]	
$T$ cycle time [Sec]	
$I_b$ brake-current [A]	
$R_{ph}$ resistance of motor (between terminals) [ $\Omega$ ]	
$R_L$ line resistance of motor cable [ $\Omega$ ]	

## Electrical installation

### Brake resistor

#### Selection of the brake resistor

<b>Step 2</b> Internal / external Brake-resistor required ? see data in chapter 1.3.3 / 1.3.4	<b>Example-Drive model</b> <b>637+/K D6R04-7</b>																																									
In case of unsufficient capability or not included internal Brake-Resistor, a type may be selected from the following list  External and internal Brake-Resistors will be switched in parallel. The internal and external performance-Data may be added in this case.	acc. to data in 1.3.3: internal resistor: Cont. Power Pd = 30W Peak Power Pmax = 1700W Required: Pd = 9,3W Pmax = 405W <b>Result: The internal capability is sufficient</b>

### 5.8.2 Configuration of the brake resistor

Possible ballast circuit configurations at digital devices

a) Compact design

The plug-in modules of servo-control series 635 / 637 are provided with an on board ballast electronics. It is intended for application as compact unit KDER resp. KD6R.

These compact units contain the necessary ballast resistor incl. fuse for the ballast circuit.  
Except KD6R 16..30-7 (external resistor only).

b) Rack design

While the plug-in modules are used in a rack, the NEB power supply module takes dissipation of the braking energy (adjustment of ballast monitoring: please see NEB manual).

In this case the ballast electronics of the plug-in module will be deactivated with the configuration parameter "Ballast aktiviert = N". All further ballast parameters are no longer relevant then.

r.g. a) Adjustment of ballast circuit for compact units:

In this case the ballast electronics of the plug-in module will be activated."Ballast aktiviert = J".

The operating point has to be adjusted dependent on the voltage variant.

"Ucc Ballast Ein = 375 V" for 230 V AC supply

"Ucc Ballast Ein = 720 V" for 400..460 V AC supply

As resistance value, the parallel resistance from internal and external resistance has to be adjusted.

e.g. "Ballastwiderstand = 300 Ohm" for KD6R-10-7 (internal resistance only)

"Ballastwiderstand = 75 Ohm" for KD6R-10-7 (+ external 100 Ohm / 100 W)

As ballast power (braking energy), the sum total of internal and external resistor power has to be adjusted.

e.g. "Ballastleistung = 30 Watt" for KD6R-10-7 (internal resistance only)

"Ballastleistung = 130 Watt" for KD6R-10-7 (+ external 100 Ohm / 100 W)

Precondition for correct monitoring of shunted ballast resistors is the nearly same ratio of P - cont. power to P - pulse power. This is guaranteed with the Eurotherm standard combinations.

KD6R 16..30-7 units do not contain an internal ballast resistor.

At these versions the values of the external resistor can be feeded directly.

## Electrical installation

### Brake resistor

#### 5.8.3 Additional informations

Adjustment of load-supervision

used brake resistor R intern	R extern	EAS YRIDER- data adjustment acc. to...
X		R intern
X	X	R extern
	X	R extern

#### Paralleling of resistors:

possible in respect of the limits in accordance to chapter 1.3.3 / 1.3.4

General rule for resistor data:

$P_{max} / P_d \leq 59$

**Caution !**

#### Placing of external brake resistors

Brake-resistor are dissipating heat !

Make sure, that there will be no fire-danger in case of operating the resistor in nominal- or fail-conditions

## 6 Wiring instructions

### 6.1 General Information

Digital servo drives are designed for **operation in metallic grounded enclosures**.

For perfect operation as well as for observance of all regulations the **front board must be connected with the enclosure electrically and fixed**.

### 6.2 Control cabling

Recommended cross section 0,25 mm<sup>2</sup>.The control signal lines must be laid separate from the power signal lines.(see chapter 6.7.1)

The resolver cable should contain three shielded pairs **and** be shielded as a whole. The shielding should be connected to the ground spread out on the regulator side.We recommend using Eurotherm resolver cable **KIR**. Cable for transmitting data are always to be laid shielded !

### 6.3 Power cabling

Recommended section according to rated current. Use only 75° Cu-cables.

### 6.4 Installation of the rack

When the rack is secured not in a hinged bay but on a mounting plate, it is recommended to do the wiring of the connections for the power connector X50 on the rear of the rack before installing. With hinged-bay installation, the customer must ensure that the parts sensitive to voltage such as the Ucc bus, mains supply lines, etc., are protected against electric shock.

### 6.5 Analog setpoint

The setpoint input is a differential input. Therefore the poling can be done depending on the requirements.

Important: the setpoint voltage must be galvanically connected to the reference potential of the control connections (plug X10). It is possible to connect one pole directly to GND.

### 6.6 Safety rules

**CAUTION !**

**Plug / unplug all modules only when**

**Ucc (DC-BUS) is off, that is, the green LED on the power supply module is off and the discharge time > 3 minutes has elapsed.**

**The user must ensure protection against accidental touching.**

### 6.7 Electromagnetic compatibility (EMC)

Confirmity in accordance with the EEC Directive 89/336/EEC has been evaluated using a reference-system, consisting of a compact type drive and a line-filter on mounting-plate, connected to an AC-synchronous motor.

Mainly responsible for EMC-emissions is the motor cable. So this has to be installed exceptionally carefully. The layout of grounding is very important. Grounding has to be low-impedant for high frequencies. That means, all ground-connecting parts have to use area.

The measurements made are valid under the use of Eurotherm - cables, suppression aids and line filters and by application of the following wiring instructions:

## Wiring instructions

### Electromagnetic compatibility (EMC)

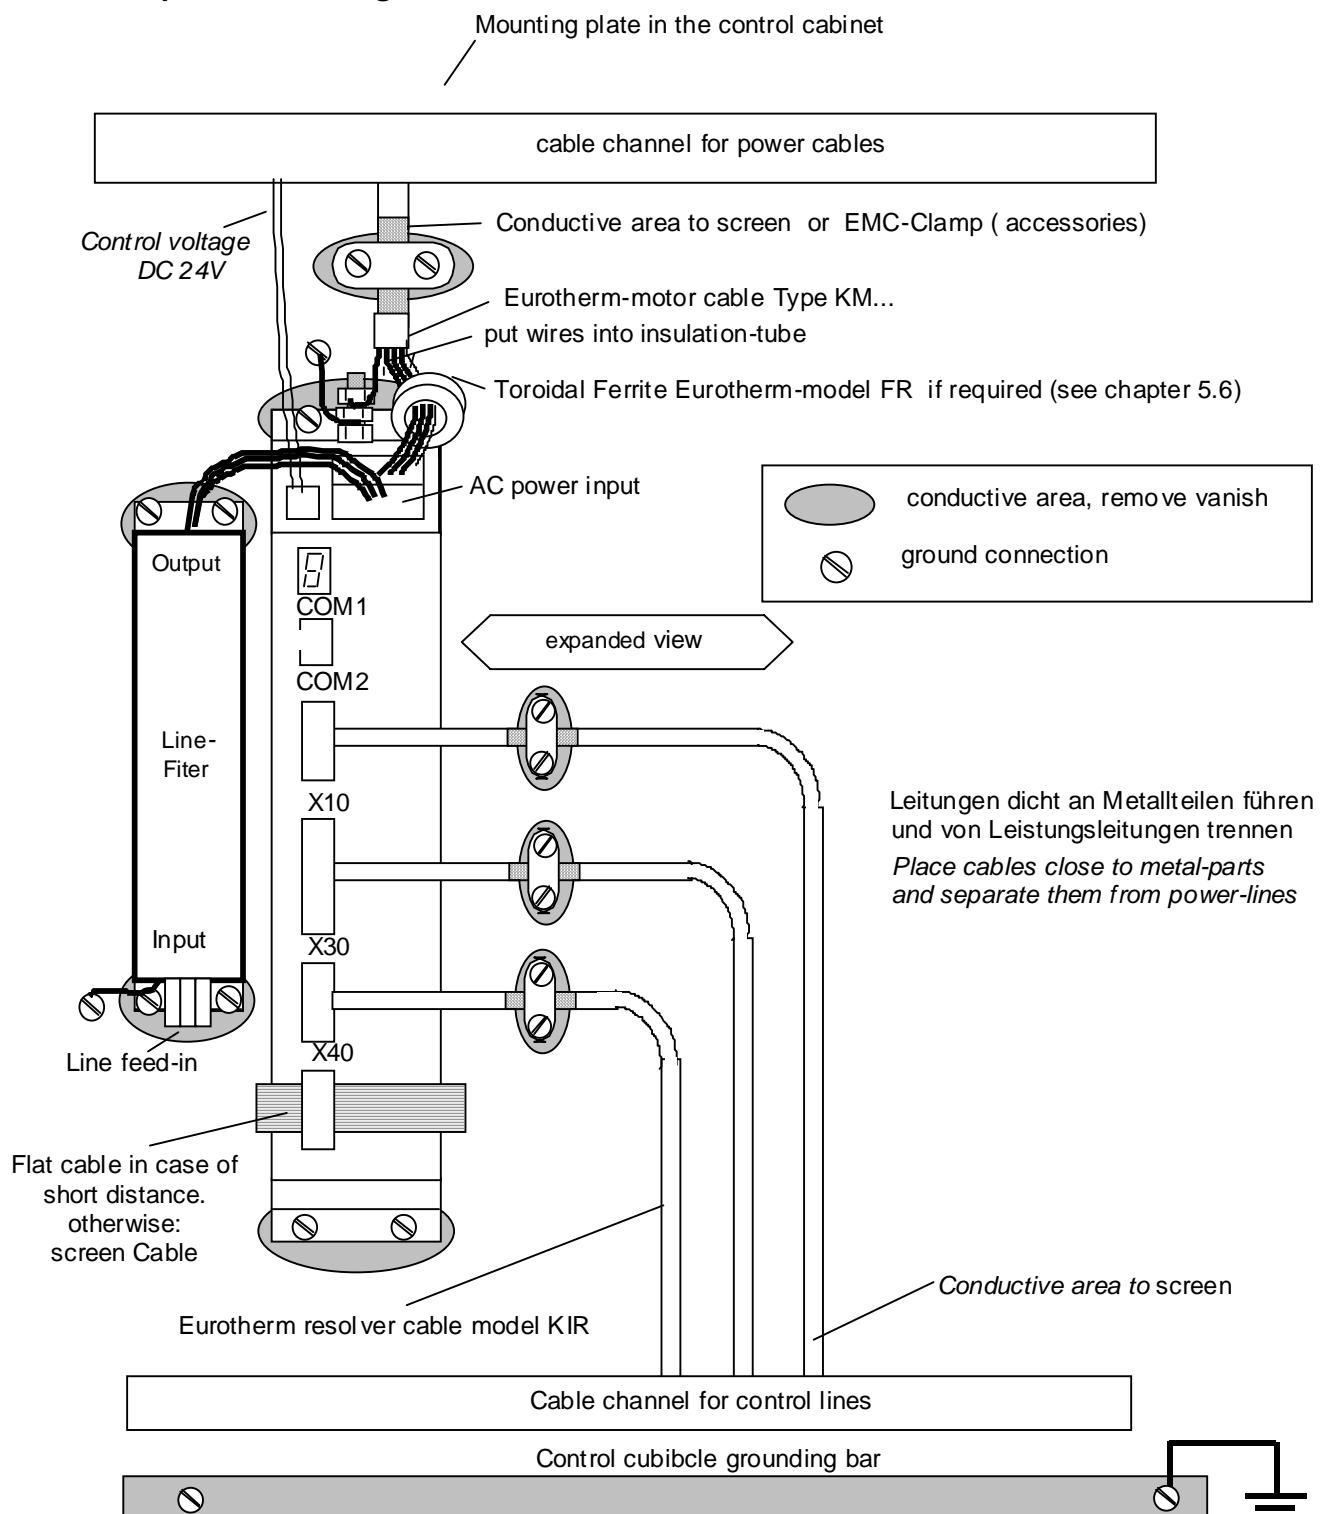

#### 6.7.1 Hints for mounting

<b>A</b>	All components are mounted inside of a steel control cubicle on a mounting plate (thickness min. 3mm). Recommended: Galvanizing	
<b>B</b>	The connection between drive housing filter-housing and mountig-plate must be blank and not reduced by varnish. All screws must be well fixed !	
<b>C</b>	Use only Eurotherm-filters and cables for motor and resolver	
<b>D</b>	Place all wires and cables as close as possible to any grounded metal planes	
<b>E</b>	Separate power- and control cables. Minimum distance: 0,3m Crosspoints: 90°	
<b>F</b>	Avoid cable-loops. Especially the line between line-filter and drive has to be as close and short as possible (drilled)	
<b>G</b>	Maintain screen as close as possible to the cable-end (max distance 8 cm)	
<b>H</b>	Connect screen-connections according to general view of connetions, see chapter 2.1. Ground screens on both sides, shortest way. For long cables: Connect additional screen-area along the way	
<b>I</b>	Connect screens area-contacted to good grounded points	
<b>K</b>	Connect unused wires in cables to ground	
<b>L</b>	Install control cables directly close to grounded metal-parts or screend when leaving the control-cubicle	
<b>M</b>	Take care for good grounding of control-transformer (DC 24V). Use transformer with metal-socket and take care for conductive contact to mounting-plate	
<b>N</b>	Take care for good general grounding of the complete system. Interconnect several mounting-plates with copper-rails or copperband. Take care for ground connection between conrol-cubicle and machine !

### 7.2 Digital communication

see chapter 1.1.1

## 8 Commissioning

**CAUTION !**

**Wiring errors or incompatible operation may cause unpredictable motions.  
Avoid danger for men and machine !**

### 8.1 Preparation

- For PC-link use the Eurotherm communication software EASYRIDER® Windows - Software. For the start, we suggest exercises in simulation mode to get familiar with EASYRIDER. This chapter presumes the knowledge how to handle EASYRIDER. Suggestions: Use testequipment to train yourself. EASYRIDER® Windows - Software contains interactive HELP - functions.
- For security-reasons the access to several functions is blocked by password. Commissioning has to be executed by trained stuff only.
- Users may have their application-adapted commissioning methode when familiar with the product, on their own responsibility.
- The system must be in accordance with all valid safety specifications. The function of all safety equipment (limit-switches for example) have to be checked.
- To activate the power-stage of the drive, the "ACTIVE"-signal (X10.22 against X10.9) has to be exited.

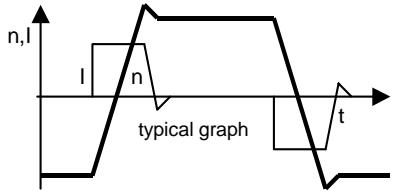

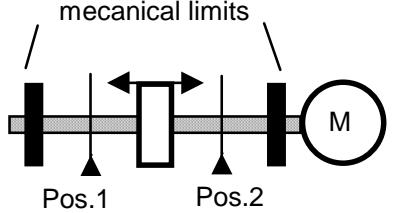

## Commissioning

### 8.2 Commissioning in steps

Step	Action	Remark
1	<b>Before switching on</b> Check the wiring, especially: Filterpolarity, supply motor wiring, motor polarity resolver wiring, polarity (or other feedback systems)	
2	with critical mechanical parts: remove motor shaft from application	avoid danger
3	Connect PC by RS232 link to the drive service port COM1 and start EASYRIDER®	
4	Switch on control voltage Us (DC 24V) EASYRIDER® communicates (see diagnosis F9)	7-Segment-display 
5	<b>Set up state</b> <b>NOT ACTIVE (X10.22 against X10.9)</b> <b>Power ON</b>	7-Segment-display 
6	Are parameters already evaluated ? <b>yes:</b> load parameter file *.WDD. Store parameters in the drive. If existent: load BIAS-file *.WBD and store it in the drive. proceed with <b>10 or 15</b> (experts)	<b>no:</b> continue with <b>7</b>
7	Menue Comissioning: Select the used motor from the EASYRIDER® - Library Adjust max. current to nominal motor current or smaller	reduced torque
8	When leaving that menue: Tuning-parameters for current loop will be calculated and offered to the user. Normally, these values give dynamic servo motion.	confirm acceptance of offered parameters
9	store data power-fail-save in the drive (F7)	
10	<b>Menue: Tuning speed loop</b>	

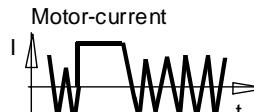

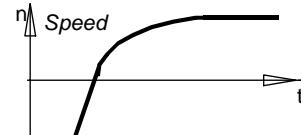

## Commissioning

### Commissioning in steps

Step	Action	Remark
11	"ACTIVE" switched	7-Segment-display 
12	Adjust test generator as required. Activate test generator with "START Motor". Activate graph to display motor current or speed. can be optimized manually (P- and I-gain)	
13	Is the result ok? <b>yes:</b> continue with 14 <b>no:</b> continue with U1	
14	Preparation to the position controller The commissioning of the position controller is first recommended without linked up mechanics. In the case of secure functions, the mechanics can then be linked up.	
15	<b>Power OFF.</b> connect motor-shaft to the application Move application to a free area between mechanical limits. <b>Power ON</b> <b>Menue: Tuning position loop</b>	
16	Adjust testgenerator. Select Pos.1 and Pos .2 to uncritical values. Select slow speed and slow acceleration first, rise up later.	mind: reaction-time to <b>Emergency Stop</b>
17	"ACTIVE" - switched. Every activation of "START Motor" exits a motion from Pos. 1 to Pos.2 and, with the next activation, from Pos 2 to Pos. 1	
18	Observe the behavior of application and graph. Optimize tuning-parameters (P-, I- and V gain)	
19	Is the result ok? <b>yes:</b> continue with 20 <b>no:</b> continue with 9	
20	<b>Basic power-up is done now.</b> Further functions (Interfaces, fieldbus functions, synchronizing and so on may be done adapted to the selected equipment.	
21	Select the menu <b>File</b> "store parameters" and store the data in the regulator, protected against loss, with the F7-key.	data save

## Commissioning

### Commissioning in steps

Step	Action	Remark
U1.1	<p><b>Menue: Tuning Speed Loop</b>            Stable parameters are calculated bases on the system data; and can be called up with F5.            Sometimes it is recommended to make further manual tuning.            Rated values can be sourced either digital by the internal generator or analog by using +/-10V at X10.5/18.</p> <p><b>ATTENTION !</b>            Too hard tuning will cause current-ripple and high power-dissipation.</p>	 P-Gain too high or I-time constant too small Motor-noise
U1.2	Too weak adjustment causes slow loop-reactions, that may cause problems for the tuning of position loops.	 P-Gain too small I or I-time constant too high
U1.3	Is the result ok? <b>yes:</b> continue with 9        <b>no:</b> continue with U2.1	
U2.1	<p><b>Menue: Tuning Current Loop</b>            Stable parameters are calculated bases on the system data and can be called up with F5.            Manual tuning may be sensfull.</p> <p>Rated values can be sourced either digital by the internal generator or analog by using +/-10V at X10.5/18.</p> <p><b>ATTENTION !</b>            Tuning of current loop should be only done after consultation of Eurotherm experts.  <b>continue with 9</b></p>	

## 9 Diagnosis and trouble shooting

### 9.1 7-segment display

Many sources of faults can be narrowed down with the diagnosis display.

display	explanation	output ready	output <sup>2)</sup> warning	Comment
/ /	no display	off	off	any control voltage? external fuses ok?
/ - .	system ready for operate	on	off	regulator ready not activ
/ . /	drive ready for operate ! system active	on	off	DC-bus within the boundaries
/ - /	internal STOP with serial deactivating	off	off	activate drive via serial interface
/ - /	regulator of serial interface COM2 deactivated !	off	off	only if bus interface is integrated or the BIAS-command deactivated !
/ - /	deactivated with delay time for the brake	on	off	deactivated via input.
		off	off	deactivated via serial command.
/ - /	Activ input is activated with switching on	off	off	switch enable X10.22 low and then high
/ u /	undervoltage of control voltage	off	off	control voltage < 17 V.
/ / /	undervoltage in DC-bus <Ua low threshold	off	off	power supply switched on? power supply unit ok? internal fuses ok? Error signal disappears, if DC-bus voltage over the threshold. EASYRIDER® Windows – Software.
/ l /	fault in feedback system (e.g. resolver)	off	off	wiring to encoder system ok? encoder system ok? encoder system supply ok?
/ l /	I <sup>2</sup> t-overload of the regulator	1)	1)	does the control loop oscillate? P-amplification too high mechanics stiff? requirements too high? is warning /8/ evaluated?
/ u /	overload of the motor I <sup>2</sup> t	1)	1)	does the control loop oscillate? P-amplification too high mechanics stiff? requirements too high? is warning /8/ evaluated?
/ l /	overtemperature of the output stage (> 95°C)	1)	1)	adequate cooling of the regulator? ambient temperature too high?

1) Reaction to these errors see chapter 3.3

2) With configuration corresponding chapter 3.1

\* Only warning and/or status indicator

## Diagnosis and trouble shooting

### 7-segment display

display	explanation	output ready	output <sup>2)</sup> warning	Comment
/U/	overvoltage on DC bus	1)	1)	ballast module ok? adequate ballast module?
/7/	chassis shorting and short circuit due to hardware	off	off	motor cabling ok? digital-loops setup ok? short circuit to chassis in the motor? braking resistor: ohm- value too low? try to start fresh! send in for repair
* /D/	WARNING! overload of the regulator I <sup>2</sup> t or motor I <sup>2</sup> t or temp.-output stage too high. If no reaction within approx. 3sec.it switches off with signals /3/, /4/ or /5/. Signal /8/ clears when there is no more danger or it is switched off	off	1)	mechanics stiff? defective bearings; cold grease? reduce requirements and creep to next possible STOP
/J/	overtemperature motor(NTC/PTC)	off		check overload of the motor / cooling etc.
* /h/	motor temperature too high	on	1)	check overload of the motor / cooling etc.
/-/	ballast active			Brake energy is removed
/U/	warning I <sup>2</sup> t ballast too high	on	1)	ballast resistance usage >90%
/U/	switch off ballast	on	1)	ballast resistance overloaded
/H/	X 300 – Modul not inserted or wrong inserted or defect	off	off	X 300 testing Chapter1.4.3.1 Layout
/H/	X 300 – setting wrong	off	off	X 30 / X40 Counter-Configuration test in the EASYRIDER® Windows – Software
* /L/	tracking window exceeded			only in operation mode position control, will be deleted with the next run-command
/E/	tracking error with switch off			only in operation mode "position control"
/Y/	memory-checksum-error	off	off	try new start

1) Reaction to these errors see chapter 3.3

2) With configuration corresponding chapter 3.1

\* Only warning respect. status indicator

The error signals are shown as long as there is control voltage (Us), also when the power (DC-Bus) is switched off for safety reasons.

## Diagnosis and trouble shooting

### 9.2 Reset of a regulator trouble

The error signals 2 - 7, 9, L, U, u, Y, II, H of the drive can be reset via:

1. Control voltage OFF/ON,
2. the serial command “Drive Reset“ 0x02

The host login must be occurred.

The drive must be deactivated via the serial command “deactivate Drive“ 0x00.

3. the fieldbus-command “ Drive Reset“ 0x16 (22 decimal)

The host login must be occurred via the BUS command 0x01. The drive must be deactivated via the BUS command “deactivate Drive“ 0x14.

The fieldbus command “Drive Reset“ with constant repetition of the fieldbus command 0x16 will be works-off only once.

For further processing, it is necessary, meanwhile to send another control word (e.g. 0 status order).

#### 4. a 0 – 1 flank on input X10.11

Precondition:

- The input X10.11 is with function 1 “Reset drive fault“ configured (EASYRIDER® Windows – Software)
- There is no host login.
- The input Active,(X10.22) is inactive (0V)
- The signal must be present min. 250 ms

**A general precondition for correct execution of the Reset is the elimination of the error cause**

#### Notice !!

After remove of the tracking error deactivation “L“, the warning message “L“ (tracking error) is active up to the next move command.

The **error signal “≡”**(releasing before ready) can be reset by deactivation the drive.

## Diagnosis and trouble shooting

### 9.3 Trouble shooting

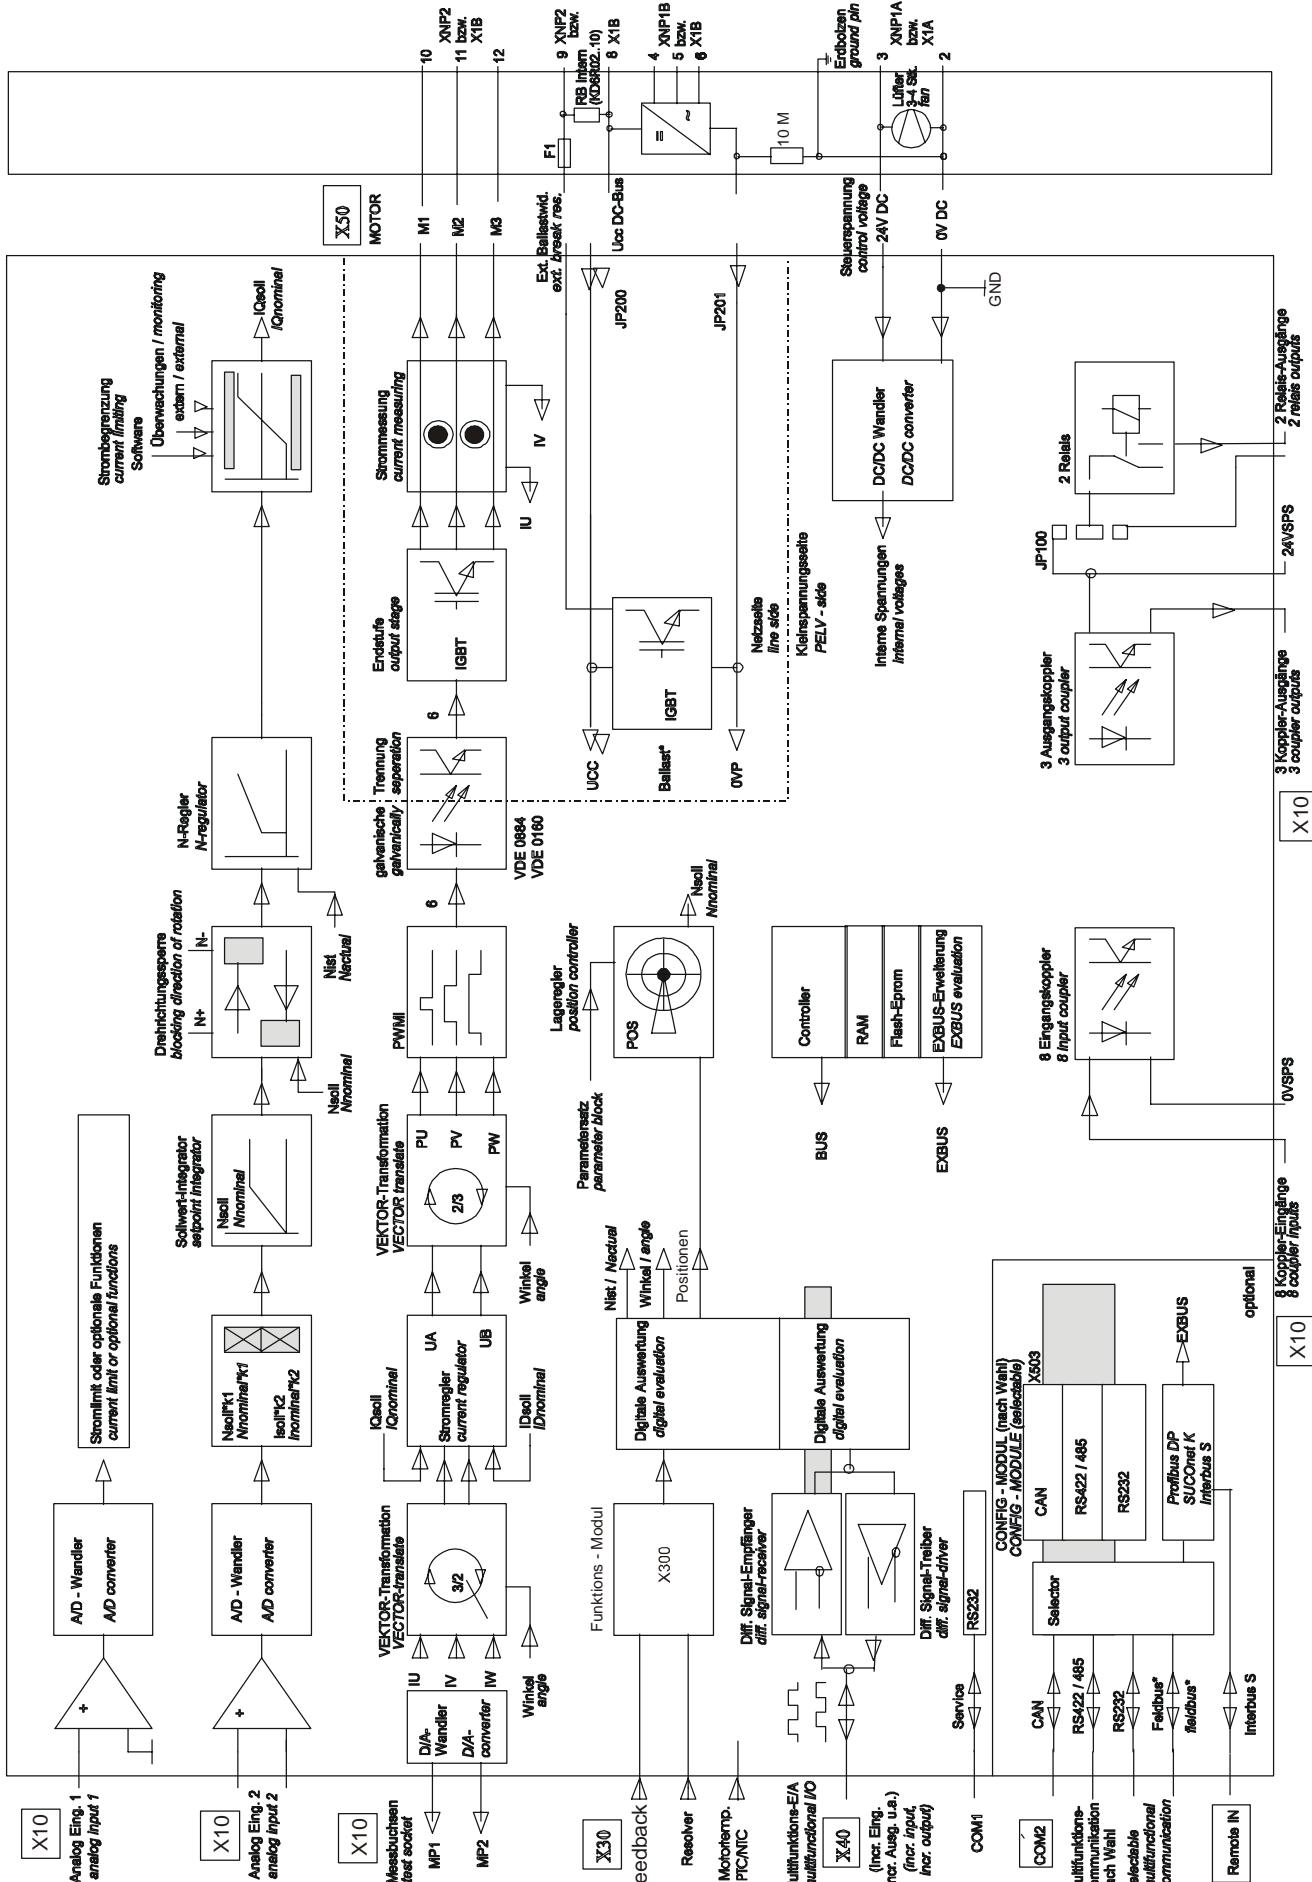

The following list refers to faults which can occur during operation.

Display: / . /

Error	Explanation and remedy	
no motor run despite current flow	motor mechanically blocked? motor brake released?	1)
motor runs unevenly	check setpoint wiring check grounding and shielding too high P-amplification in the speed controller reduce value (with EASYRIDER® setting/speed controller) too small I-time in the speed controller? reduce value (with EASYRIDER® setting/speed controller)	
no reaction of setpoint progression, despite torque in standstill	Limit switch functions effective (BIAS)	
no current flow; no torque despite activating the regulator correctly	motor cables interrupted? Is input "I extern" (X10.19) activated (config. menu) and not notched up? limit switch - input activated and not notched up?	
Interference symptoms with power frequency	Ground loops in setpoint or actual value wiring? Shieldings laid on both sides? Signal cables near high voltage cables?	
Motor takes up preferred positions after activation	Position encoder or motor cables with reversed poles? Resolver orFeedback- encoder incorrectly adjusted? Number of motor poles wrong matching? (config. menu)	1)
Motor runs up immediately after activation although there is no setpoint	Motor cables or feedback- cables reversed? Encoder incorrectly adjusted? (e.g. Resolver)	1)
Motor reaches in idling cycle very different speed when running to the right or to the left	Feedback-Encoder incorrectly adjusted (e.g. Resolver)	

1) Display /3./ or /4./ mostly short after activating; before warning /8./

## 10 Block circuit diagram

## 11 General technical data

### 11.1 Power circuit

galvanic separation from control circuit	in acc. with EN 50178 / VDE 0160
specification in accordance with	UL 508C and cUL
short circuit and to frame proof for	Min. 2000 releasings
overvoltage monitoring D6R..-3	Max. 400V DC ±5V DC
overvoltage monitoring D6R..-7	Max. 765V DC ±10V DC
undervoltage monitoring	min. 15V DC; configurable
overtemperature switch off at	95 ° C +/- 5%
clock frequency	4,75 kHz
frequency of current ripple	9,5 kHz

### 11.2 Control circuit

galvanic separation from power circuit	in acc. with EN 50178 / VDE 0160
further informations:	see concept of insulation chapter 1.3.1
	see data compact units chapter 1.3.3
	see data plug-in modules chapter 1.3.4

### 11.3 Signal inputs and outputs, connection X10

additional galvanic separation from power and control circuit	
nominal voltage of the in- and outputs	24 V DC
number of outputs signal outputs via OPTO coupler	5 $U_{max} = 45V$ DC; $I = 0..60$ mA; short circuit proof, resistive load
signal outputs via RELAY	$U_{max} = 45V$ DC; $I = 1\mu A...1,2A$
contact protection with inductive load	internal varistor
number of inputs signal outputs via OPTO coupler	8 $L = 0...7$ V DC or open $H = 15...30$ V DC $I_{In} 24VDC @ 8$ mA
reaction time of the intput X10.2, X10.4, X10.11, X10.14, X10.15, X10.24	> 1 ms
reaction time of the intput X10.4, X10.25 (configured as latch input "see chapter 3")	0,2 ms
Effect of cycle-time	$\leq 0,02$ ms

## General technical data

### 11.4 Digital control

<b>current control</b>	
Loop-Cycle-Time	105 µs
settings	according to factory specifications or motor data
current limits, Adjustment by:	speed control -Menue Analog Input 0..10V = 0..100%; can be normed, 10Bit

<b>speed control</b>	
Loop-Cycle-Time	210 µs
settings	speed control menu
differential setpoint input analog resolution (including sign)	$U_{\text{soll}} = 10 \text{ V}$ , can be normed; $R_i = 10\text{k}$ 14 bit
digital setpoint input	via interfaces

<b>position control</b>	
Loop-Cycle-Time	840 µs

### 11.5 Digital communication

RS232 - service interface	COM1 19200 baud, 8 databits, 1 startbit, 1 stopbit, parity: even
Optional RS232 / RS 422 / RS 485 on SUB D – socket	COM2
CAN, Profibus DP, SUCOnet K on SUB D - socket Interbus S on SUB D - socket (OUT) Interbus S (Remote IN)	additional SUB D plug

### 11.6 Resolverauswertung / Transmitterprinzip

<u>General:</u>	
The specified data refer to the combination of the standard resolver interface with Function-Module X300_RD2; operated with the Eurotherm resolver R 21-T05, R15-T05	
carrier frequency	$f_t = 4,75 \text{ kHz}$
ripple of the speed actual value signal	2% <sup>1)</sup>
max. position resolution for one revolution	65536 / 16 bit
absolute position accuracy	+/- 0,7 ° <sup>1)</sup>
relative position accuracy	+/- 0,08 ° <sup>1)</sup>

<sup>1)</sup> Data under check, Reality: Quality improved

## General technical data

### 11.7 Controllersystem

system run-up time after switching on the control voltage	max. 6 sec.
data memory / organization	Flash Eprom 256 KB RAM 64 KB; EEPROM 32 kByte

### 11.8 Analog-Outps

#### measuring pin X10.17

signal range	-10V.....0.....+10V magnifier function can be normed
resolution	8 bit, independend of norming
internal resistance	1,8 kOhm

#### measuring pin X10.6

signal range	-10V.....0.....+10V magnifier function can be normed
resolution	10 bit, independend of norming
internal resistance	1,8 kOhm

### 11.9 Thermal data

thermal data	see chapter 1.3
--------------	-----------------

### 11.10 Mechanical data

dimensions	see chapter 1.4
weight	see chapter 1.3

Further data you will find in chapter 1.3

## 12 Disposal

The digital servo drive consists of different materials.

The following table shows, which materials can be recycled and which have to be disposed of in a special way.

material	recycle	disposal
Metal	yes	no
plastics material	yes	no
printed board assembly	no	yes

**Dispose of the appropriate materials in accordance with the valid environmental control laws.**

## 13 Software

### 13.1 EASYRIDER® Windows - Software

EASYRIDER® Windows - Software is a comfortable tool to use all drive functions.  
Detailed Online-Help-information and instructions are available..

EASYRIDER® Instructions: (extract)

- Autopilot-function as interactive tutorial
- System identification
- BIAS - instruction-set editor
- Oszilloscope-function
- start-up and commissioning-tools
- Setting of parameters
- Setting of configurations
- Servo-diagnostics
- Interface diagnostics
- Fieldbus diagnostics
- Motor library
- save system data in file
- load system data from file
- send system data to servodrive
- save system data in servodrive
- load system data from servodrive

**Important:**

Edited data in EASYRIDER® are transmitted to the RAM of the servodrive and **active after** use of the instruction **SEND**. **Only the instruction SAVE in EEPROM** writes data into a nonvolatile memory. Data are stored there power-fail save.

## Software

### 13.2 Eurotherm programming language BIAS

In **Operating mode 5** – Position control with BIAS, three user-defined programs can be executed parallel. The BIAS-program and the PLC-program

(sequence cascades, 1 command per position controller sampling = 844 uSec) as well as the Mathematics program (cyclic execution in remaining time of processor).

The BIAS-program is primarily intended for administration of travel commands. If application permits, also simple calculations can be performed and analog/digital I/O's can be serviced in this task.

The PLC-task is conceived to perform I/O logic, sequence control, monitoring and CAN-Bus communication.

The Mathematics program is designed for complex calculations, e.g. computing of a cam, executed by the BIAS-program afterwards. But it is also possible to store the same tasks here, as basically defined for PLC-task, which can increase PLC performance of the 637+ controller approx. twenty times.

While the BIAS-program will be executed from the start block directly after activation of **operating mode 5**, the PLC-program will be first started by BIAS-command "PLC-program" and the Mathematics program by command "Mathematics program". At reaching the command "End of program" (Mode = 0) the respective execution pointer re-jumps to his start label.

Within the command set the following command groups are provided:

#### Program flow control

- Fixing start/end of main- and sub-programs
- Conditional and unconditional jump commands

#### Travel relevant commands

- Positioning commands
- Parameter commands
- Technology functions
  - >Register positioning
  - >PID-control
  - >Synchronous applications

#### Logic commands

- Logic commands for coils and internal relays

#### Variable commands

- Writing and reading of parameters
- Fundamental operations of arithmetic with long integer
- Type-conversions long integer <=> double float (Math.task only)
- Fundamental operations of arithmetic with double float (Math.task only)
- SIN(x),COS(x),SQRT(x) with double float (Math.task only)
- Writing and reading of synchronous profile tables.

#### CAN-Bus commands

- Communication with other Eurotherm products

## Software

### Eurotherm programming language BIAS

The user has the possibility to program his sequence himself from this set of commands.

#### Available program area

Set number

0000 -

... | can be selected via  
... | data inputs X10.xx  
... | max. to block no. 63 and  
... | and Strobe X10.2

... |

0063 -

... |

... |

1499 last block

The BIAS operation set is listed on the next page.

You can read the exact function of the individual commands in the help function of the EASYRIDER® Windows -Software in the BIAS editor or in the BIAS command description (UL:10.06.05)

### 13.3 BIAS-commands

	0	1	2	3	4	5	6	7	8
0	move position	move position + parameter	position =	position = [variable X]	[variable X] = position	NOP	flag X =	If input X ?	[variable X] =
1	move incremental position	move incremental position + parameter	speed =	speed = [variable X]	[variable X] = speed	end of program	If flag X = ?	If output X ?	If [variable X] ? const.
2	move datum	move datum + parameter	acceleration =	acceleration = [variable X]	[variable X] = acceleration	sub-program	flag X = flag Y	output X =	[variable X] = [variable Y] + const.
3	move infinite positive	move infinite positive + parameter	deceleration =	deceleration = [variable X]	[variable X] = deceleration	end of sub-program	flag X = input Y	output X = flag Y	[variable X] = [variable Y] - const.

## 14 Certificates

### Testing and Certification

The 637+ Servodrive is based on the construction of Type 637. Essential changes are only effecting the control-circuits of the device. Following our technical point of view, this fact enables to apply all certificates related to Type 637 (see next pages) to the type 637+ as well.

### EG-Konformitätserklärung

Name/Anschrift des Ausstellers: Eurotherm Antriebstechnik GmbH  
Im Sand 14  
76669 Bad Schönenborn-Langenbrücken

Produktbezeichnung: Geräte, sonstige

Typenbezeichnung: 637/K D6R02.S3-3, 637/K D6R02.S3-7, 637/K D6R04.S3-3, 637/K D6R04.S3-7, 637/K D6R06.S3-3, 637/K D6R06.S3-7, 637/K D6R10.S3-3, 637/K D6R10.S3-7, 637/K D6R16.S3-3, 637/K D6R16.S3-7, 637/K D6R22.S3-3, 637/K D6R22.S3-7, 637/K D6R30.S3-3, 637/K D6R30.S3-7

Das bezeichnete Produkt erfüllt die Bestimmungen der Richtlinie:

**73/23/EWG**  
mit Änderungen

**"Richtlinie des Rates zur Angleichung der Rechtsvorschriften der Mitgliedstaaten betreffend elektrische Betriebsmittel zur Verwendung innerhalb bestimmter Spannungsgrenzen".**

Die Übereinstimmung des bezeichneten Produktes mit den Bestimmungen der Richtlinie wird durch die vollständige Einhaltung folgender Normen nachgewiesen:

**DIN EN 50178 (VDE 0160):1998-04 EN 50178:1997**

Das VDE Prüf- und Zertifizierungsinstitut (EU-Kenn-Nr. 0366), Merianstr. 28, D-63069 Offenbach, hat das Produkt geprüft und zertifiziert. Der Zeichengenehmigungsausweis berechtigt zum Führen des untenstehenden Zeichens des VDE.

Zeichengenehmigungsausweis: 108336

Aktenzeichen: 19235-3990-0003 / 22WYD F17 / EN

Bad Schönenborn, 07.06.99

J. Weißert
