

SD 500

Series

VARIABLE SPEED DRIVE

Easy to drive

A dream a promise, the commitment.

We had always dreamt about an integral service that included, commissioning support, 24 hour technical assistance, rapid workshop response with less than 1 day repair or replacement commitment. Three year warranty, immediate delivery, customized training and professional application engineering.

O1 SD500

the SD500 series goes further

Available in 200 to 230VAC and 380 to 480VAC, in a power range that goes from 0.75kW to 90kW, with a much more advanced software, ready to control a wide range of applications.

WARRANTY
3
YEARS
for the whole series

PLC Board with additional I/O, auto-diagnosis function, real-time clock, ...

Conformal coating

Continuing with our protection philosophy, the electronic boards receive the same conformal coating as with all the Power Electronics products.

- ✓ High Control Precision
- ✓ Reliable and Robust Performance
- ✓ Improved Programming Interface
- ✓ Easy Data Presentation
- ✓ Advanced Keyboard and Programming Unit
- ✓ Expanded Range of Options (Encoder board, PLC board,...)
- ✓ Three-phase input voltage: 200-230VAC and 380-480VAC
- ✓ Modbus Communication (optional DeviceNet, Profibus, Ethernet...)
- ✓ Harmonic built-in filter for the full range
- ✓ IP21 Protection Degree

New modular design
of accessories

Easy set up and programming

The SD500 offers a complete set of efficiently organised parameters that are presented in order to speed up the programming, the commissioning and the maintenance, with extended descriptions to facilitate navigation through them.

Certification
and Approval by
Standards
CE, UL, cUL, CTick

O2 SD500

> technical specifications

INPUT	Power Supply	200 to 230 Vac (-15% to +10%) Three phase 380 to 480Vac (-15% to +10%) Three phase
	Input frequency	50±60 Hz ±5%
	Input power factor	96%
	Input EMC filter	From 0,75kW to 22kW - Classification C2 From 30kW onwards - Classification C3 [1]
	DC Reactance	Integrated as standard
OUTPUT	Output voltage to motor	200 to 230Vac Three phase [2] 380 to 480Vac Three phase [2]
	Overload current capacity	Constant Torque: 150% during 60 sec Variable Torque: 110% during 60 sec
	Output Frequency	0 to 400Hz [3]
	Frequency Tolerance	Operation with digital signals: 0.01% of the maximum frequency Operation with analogue signals: 0.1% of the maximum frequency
	Resolution of the Frequency set	Operation with digital signals: 0.01Hz Operation with analogue signals: 0.06Hz (maximum frequency 60Hz)
ENVIRONMENTAL CONDITIONS	Modulation Frequency	Maximum 15kHz [4]
	Standard protection	IP21
	Operation temperature	Constant torque: -10°C to +50°C
	Storage temperature	-20°C to +65°C
	Relative humidity	<90%, without condensation
	Altitude	1000m
	Altitude loss factor (> 1000)	1% for every 100m; maximum of 3000m
	Vibration	5,9m/sec² (=0,6G)
	Air pressure	70 to 106 kPa
	Location of the installation	According to Hardware and Installation Manual
CONTROL	Ventilation	Forced refrigeration: 0.75kW to 15kW (230 / 400V) and 22kW (400V) Aspiration refrigeration: 22kW (230V), 30 to 75kW (400V)
	Display protection	IP54
	Control Method	V/f Control Slip compensation Open Loop Vector Control (sensorless) Closed Loop Vector Control
	V/f Characteristics	Lineal V/f, quadratic, defined by the user
	Starting torque	Manual / Automatic
	Operation Methods	Selectable through keyboard, terminals or communications
	Analogue Inputs	1 input 0-10Vdc, ±10Vdc 1 input 4-20mA / 0-20mA
	Digital Inputs	8 configurable inputs
	PTC Connection	Yes. With analogue or digital specific setup for PTC. [5]
	Analogue Outputs	1 0-10V output (Max. Output Voltage 10V, Max. Output Current 10mA) 1 0-20mA / 4-20mA Output (Max. Output Current 20mA)
KEYBOARD AND PROGRAMMING UNIT	Relay Output	1 Changeover programmable relay (250VAC, 5A; 30VDC, 5A) 1 Programmable normally open relay (250VAC, 5A; 30VDC, 5A) 1 Programmable open collector transistor output (24VDC, 50mA)
	Dynamic Braking Unit	Built-in for 0.75 – 22kW (230VAC and 400VAC) Optional for the rest
	Type	Removable
	Distance	3 meters [6]
	Connection	RJ45
DRIVE CONNECTION	Alphanumeric Display	4 Lines of 16 characters
	Status Leds	ON LED: Power on the control board RUN LED Power on, the motor is powered by the SD500 FAULT LED: Flashing indicates the equipment is in fault
	Membrane Keyboard	7 keys to control and configure the drive, start key, stop/reset key and local/remote control. Equipped with separate memory.

PROTECTIONS	Overvoltage	Low Voltage	Overcurrent
	Overcurrent detection	Overtemperature of the inverter	Motor thermal Protection
	Phase loss protection	Overload Protection	Communication Error
	Reference Signal Loss	Hardware Failure	Cooling Fan Fault
	Pre-PID failure	Absence of motor Trip	External brake failure
	etc...		
ALARMS	Current Limitation	Overload	Underload
	Encoder failure	Fan failure	Loss of keyboard commands
	Loss of speed commands		
COMMUNICATION	Standard Hardware:	RS485 Port	
	Standard Protocol:	Modbus-RTU	
	Optional Hardware:	Profibus-DP Board, Ethernet Board, LonWorks, DeviceNet/CANopen Board	
	Optional Protocols:	Profibus, Modbus TCP, LonWorks, CANopen, DeviceNet	
ACCESSORIES	PLC Board	Encoder Board	I / O Board Expansion Board
CERTIFICATION	CE, UL, cUL, cTick		

[1] For other application categories, an optional external filter will be used. For additional information ask Power Electronics.

[2] The maximum output voltage may not exceed the input voltage supplied.

[3] The maximum frequency is 300Hz when selecting the open loop control in the programming parameters.

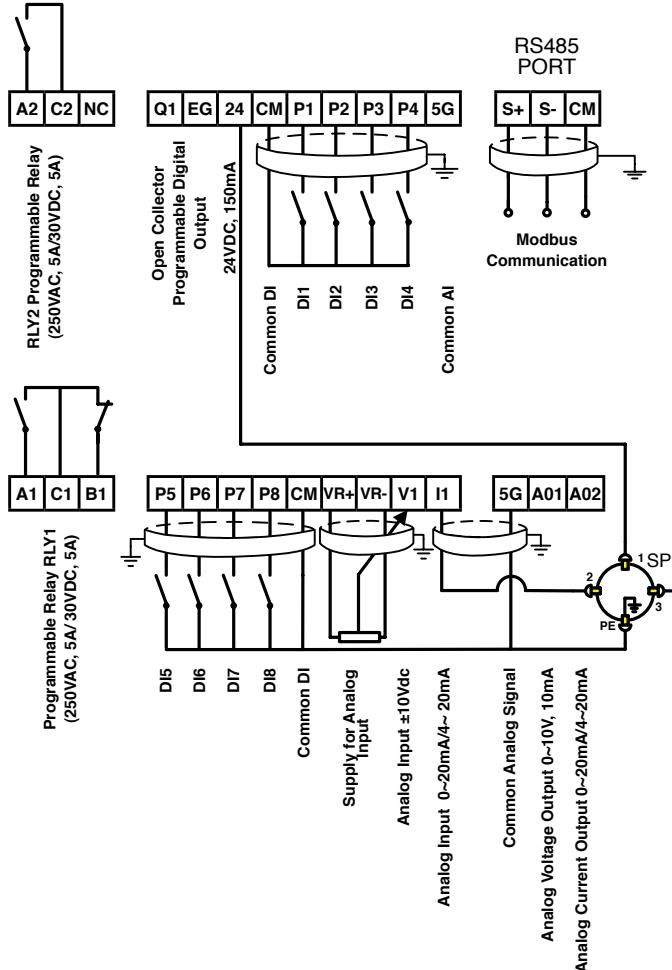

[4] The maximum allowable depends directly on the power of the drive. Consult the SD500 Software and Programming manual for additional information.

[5] For connection diagram see Hardware and installation manual.

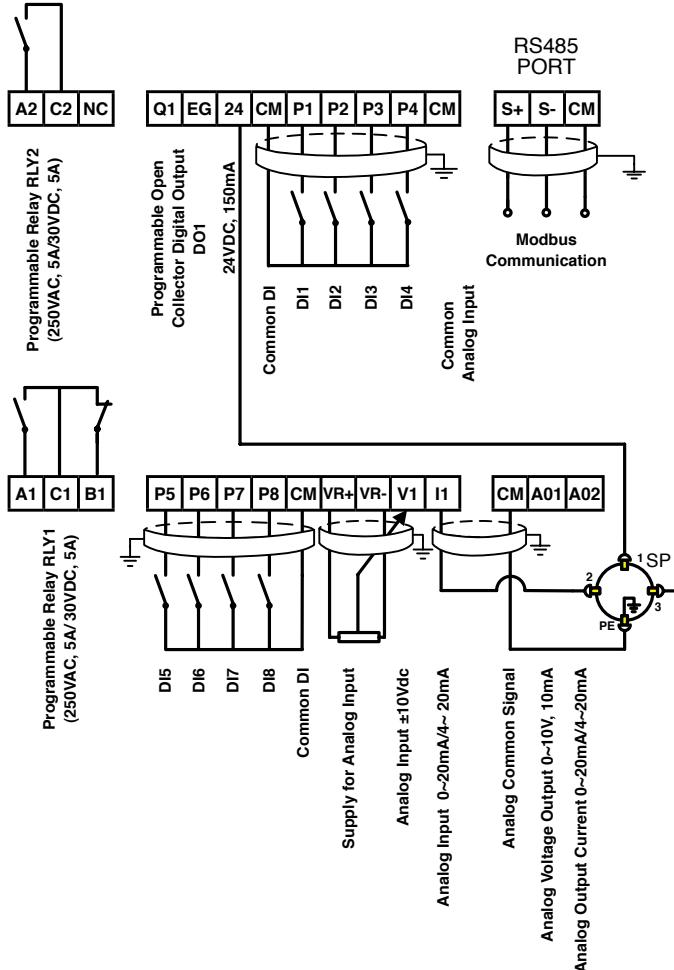

[6] It is recommended to use a cable not longer than 3 meters for the keyboard. For other configurations ask Power Electronics.

O3 SD500 > control terminals

Terminals up to 22kW

Terminals from 30kW

04 SD500

> flexibility for its application

More flexible than ever, the SD500 is a drive capable of controlling a large number of applications.

Its many options and accessories will give the performance needed to control all type of installations and machinery.

Pumping Stations

The extensive characteristic pumping programme of the Power Electronics drives is also available in the SD500.

In addition, the use of the PLC board allows us to implement improvements with custom programming, increase of the number of inputs and outputs available, auto-diagnosis and real-time clock, among others.

We will obtain a significant improvement in the energy consumption, and will reduce the downtime to a minimum.

HVAC

The use of the SD500 will slow down the speed of the extraction fans to supply the required flows and pressures so the difference of air flow between the supply and the extraction is preserved.

Other Industrial sectors

Tile production process, food industry, transport and handling of goods, dosage tools... wherever precision and regulation, demand management is required or if improvement and decrease of the maintenance times is needed, our SD500 will accomplish.

O5 SD500

> alphanumeric display

Now with more possibilities, like tracking parameters, status information, alarm management... among others.

Reading/Writing Functions

Status Visualization Lines

07

Navigation Parameters

Allows the access to the parameter groups and subgroups.

Pressed simultaneously increases the numerical setting value or listed option.

Pressed simultaneously decreases the numerical setting value or listed option.

Allows scrolling and navigation of the different groups of parameters in ascending order, and the setting (increase) of their values.

Allows scrolling and navigation of the different groups of parameters in descending order, and the setting (decrease) of their values.

Allows the access to the various user-configurable lines. It also allows to go back (escape) from a menu item to a previous step.

Allows to start the drive when it is set in local control mode.

Allows to stop the drive while it is operating. Allows resetting a drive in fault.

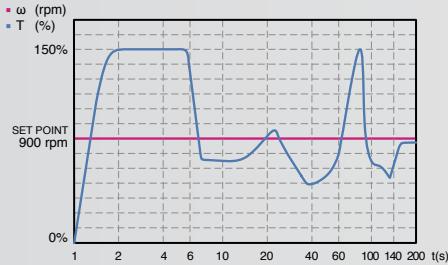

Allows the switching between local and remote control modes.

06 SD500 > one step further

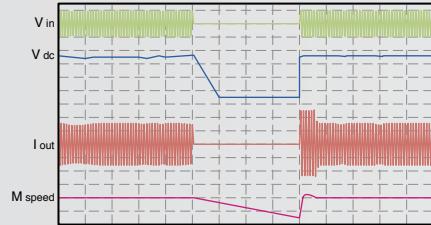

With a fully modular electronic design the SD500 manages to put at the user's disposal all required tools for the control of the installation.

In addition, its technology implements an extremely effective low speed control torque, a scalar V/f control and a closed and open loop vector control, slip compensation...

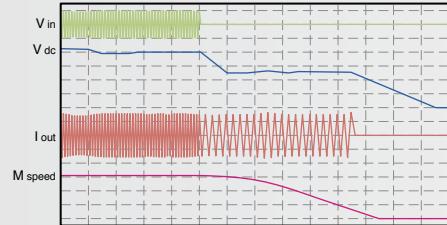

GREATER PRECISION IN THE TORQUE/SPEED CONTROL

With the Encoder card, it is possible to obtain a powerful torque control in all the range of speeds even considering zero speed.

RIDE-THROUGH FOR SUDDEN POWER SUPPLY LOSS

The SD500 will maintain the motor speed under control during a certain time until the recovery of the voltage supply.

KINETIC ENERGY CONTROL

This allows the drive to make a stable stop in the event of a failure or power loss.

07 SD500 > standard ratings

DBSD4045U	Dynamic Brake for drives from 30kW to 37kW. UL type.
DBSD4145U	Dynamic Brake for drives from 45kW to 75kW. UL type.

Ethernet Communication Module

Specifications

- Transmission Speed: 10Mbps, 100Mbps
- Transmission Method: Baseband
- Maximum distance between nodes: 100m
- Maximum number of nodes: Hub Connection
- Auto negotiation
- Maximum frame size: 1500 bytes
- Access Method to communications area: CSMA / CD
- Checking Method for error frames: CRC32
- Recommended Channel Connection: 3 channels

Communication Module CanOpen

Specifications

- Power supply: Supplied from the inverter
- Network Topology: Bus
- Baud rate: 20kbps, 50kbps, 100kbps, 125kbps, 250kbps, 500kbps, 800kbps, 1Mbps
- Maximum number of nodes: 64 (including the master)
- Supported media type: PDO, SDO, Sync, NMT
- Terminating resistor: 120Ω 1/2W Lead Type
- PDO available: PDO1 (CiA 402 Drive control and Motion device profile)
- Maximum Transmission Distance: 2500m (20kbps) - 500m (125kbps)

Communication Module Profibus - DP

Specifications

- Device Type: Profibus DP Slave
- Auto baud rate
- Sync mode
- Freeze mode
- Maximum input length: 8 words
- Maximum output length: 8 words
- Maximum data length: 16 words
- Transmission speeds: 9.6K, 19.2K, 93.75K, 187.5K, 500K, 1.5M, 3M, 6M, 12M
- Modular station
- Maximum number of modules: 2

PLC Module

Specifications

- Operation method:
 - Stored program cyclic operation
 - Role of Task Interruption
- Method of I/O control:
- Number of instructions: Basic: 29; Rev: 223
- Processor time: Basic instruction: 0.4µs/operation
- Program memory capacity: 2k
- 6 digital inputs
- 4 relay outputs
- Operating modes: RUN, STOP, PAUSE
- Self-diagnosis Functions: Watchdog timer, memory error detection, I/O error detection
- Recovery of memory after shutdown
- PID Control
- RS485 Communication: MODBUS protocol support
- External interrupts: 6
- Input filter: 0 ~ 1000ms
- RTC (Real Time Clock): year / month / day / hour / minute / second using KGL WIN
- Operating system KGL WIN

Communication Module DeviceNet

Specifications

- Power supply:
 - Powered from the drive
 - External power supply: 11-25VDC, 60mA
- Network topology: Free, Bus
- Transmission speed: 125kbps, 250kbps, 500kbps
- Maximum number of nodes: 64 (including the master)
- Supported media type: Explicit Peer to Peer Messaging
- Faulted Node Recovery (Off-Line), Master / Scanner, Polling
- Terminating resistor: 120Ω 1/4W Lead Type

Extension Module Input/Output

Specifications

- 3 digital outputs NO (250Vac/30Vdc, 5A)
- 3 digital inputs (selection of PNP/NPN, 0-25V)
- 1 voltage analogue input
- 1 current analogue input (0-20mA) Internal Impedance: 249Ω
- 1 voltage analogue output (±10V, 10mA, 11 bits resolution)
- 1 current analogue output (0-20mA, 12 bits resolution)
- Scan time:
 - Digital outputs: 1.5ms minimum
 - Analogue output: Minimum 3ms
- Protection: IP20
- Cooling method: Self cooled
